NATIONWIDE ACCESS

NM Fiber Network is an Indatel partner. This partnership gives us access to a nationwide network, delivering more opportunity for economic development in our state.

NM Fiber Network can provide wholesale ethernet solutions with one MSA, one NOC, and seamless efforts across 37 states through aggregation of more than 700 independent telcos and electrical cooperatives.

In joining force with a national broadband carrier it will allow NM Fiber Network to connect New Mexico business owners with their corporate offices directly through a safe and secure ethernet connection- wherever that may be. This will allow NM Fiber Network, through partnership with INDATEL to respond to RFP's that have multi-location businesses.

MSA- master service agreement NOC- network operations center Ethernet- wired internet connection

- Indatel is a nationwide network with connections to 700+ rural independent telecommunications providers across the Nation.
