Unlocking the Geothermal Revolution

Water and Natural Resources Committee
September 1, 2026
Socorro, NM

Geothermal

was seen as **tapped out**
or otherwise **too risky** to
develop.

Obvious surface
expressions were
discovered
decades ago.

Blind systems are hiding
across the Western US
with massive potential.

The industry had **stopped building**

1

greenfield geothermal power plant built in
USA past 10 years

Zanskar is **building** again

>100

projects
in portfolio

>300k

feet of shallow and
deep drilling completed

>300k

acres under site
control

>\$1.5B under contract, >3 GWe in sales pipeline

**Exploration + technology have unlocked discovery
but development requires complex coordination.**

We turned the failing power plant Lightning Dock in Hidalgo County into a best in class producer.

Geothermal has bipartisan support and the industry is eager to collaborate with lawmakers.
