

Fiscal impact reports (FIRs) are prepared by the Legislative Finance Committee (LFC) for standing finance committees of the NM Legislature. The LFC does not assume responsibility for the accuracy of these reports if they are used for other purposes.

Current FIRs (in HTML & Adobe PDF formats) are available on the NM Legislative Website (legis.state.nm.us). Adobe PDF versions include all attachments, whereas HTML versions may not. Previously issued FIRs and attachments may be obtained from the LFC in Suite 101 of the State Capitol Building North.

## FISCAL IMPACT REPORT

### SUMMARY

#### Synopsis of Bill

House Bill 42 expands the eligibility for the gross receipts tax deduction on wind energy generation equipment. Under current law, the tax deduction requires the deductible receipts of sales of wind generation nacelles, rotors, or related equipment to be sold to “the United States or New Mexico or any governmental unit or subdivision, agency, department or instrumentality thereof”. The new bill strikes this clause allowing the sales to be to any third party.

The effective date of the provisions of this act is July 1, 2005.

### FISCAL IMPLICATIONS

TRD’s fiscal impact analysis estimates that this bill would reduce gross receipts tax revenues by about \$70 thousand in FY06. \$60 thousand of the estimated revenue loss would be absorbed by the state; the remaining \$10 thousand would impact local governments. The estimate assumes 1,000 kW of qualified wind electric generating equipment being installed annually at an average

cost of about \$1,000 per kW. Multiplying 1,000 kW of qualified equipment by the average \$1,000.0 cost implies that about \$1 million would be eligible for the expanded deduction. Applying a 7 percent gross receipts tax rate against the \$1 million base implies a \$70 thousand revenue loss. TRD assumes that most of these projects will be placed in rural areas, so the state would absorb a large share of the revenue loss.

TRD notes that although there are currently only a small number of eligible facilities under development, the Public Regulation Commission ("PRC") has recently ordered the state's utilities to significantly increase the share of renewable energy in their total sources of supply to New Mexico consumers. Thus, revenue impacts of the proposal will probably increase as new wind facilities are developed to meet the PRC requirements.

### **ADMINISTRATIVE IMPLICATIONS**

Necessary revisions to forms and systems could be done at minimum cost within the normal replacement cycle, according to TRD.

### **OTHER SUBSTANTIVE ISSUES**

According to EMNRD, House Bill 42 supports further development of wind energy in New Mexico. Promotion, planning, and implementation of renewable energy programs, including wind, are key components of the Strategic Plan of EMNRD's Energy Conservation and Management Division.

EMNRD reports that this bill would aid development of the wind power industry in New Mexico, with particular economic benefit to rural communities. However, the existing tax deduction essentially is available only to projects that utilize Industrial Revenue Bond (IRB) financing. Removing this limitation in the current statute would simplify the financing structure of wind power projects in New Mexico, thus encouraging and accelerating development, and making the state more competitive relative to other windy states.
