SUMMARY

Synopsis of Bill

Senate Bill 113 – Making an Appropriation for the Water Resources Research Institute – appropriates \$200,000 from the general fund to the Board of Regents of New Mexico State University for expenditure in FY06 for the Water Resources Research Institute to increase research in water conservation, planning and management. Any unexpended or unencumbered balance remaining at the end of FY06 shall revert to the general fund.

Significant Issues

WRRRI suggests that the appropriation will expand the research program in terms of technical research product, student training, and providing additional data for water management.

OSE notes that there has been substantial research conducted and currently being conducted by the OSE in the field of water conservation and management, therefore it is important that the WRRRI's research be appropriately targeted and closely coordinated with the OSE, Governor's Drought Task Force, and other agencies that are involved in the same fields, to avoid duplicative efforts and activities.

CHE indicates this request was approved by NMSU Board of Regents in the amount of \$200,000 and submitted to the CHE for review. CHE has recommended funding in the amount of \$140,000 for this project.

FISCAL IMPLICATIONS

The appropriation of \$200,000 contained in this bill is a recurring expense to the general fund. Any unexpended or unencumbered balance remaining at the end of FY06 shall revert to the general fund.

ADMINISTRATIVE IMPLICATIONS

WRRRI notes that no new FTEs will be required. NMSU would retain oversight of the program.

CONFLICT, DUPLICATION, COMPANIONSHIP OR RELATIONSHIP

SB113 is a duplicate of HB192.

HB193 and SB117 are related to SB113. These bills create the Water Resources Research Institute as a division of NMSU.

SB100 relates to SB113 in that SB100 appropriates \$750,000 to the Board of Regent of New Mexico State University to conduct water management research and education programs. The appropriation is allocated to (1) the agricultural experiment station in the amount of \$375,000 and (2) the cooperative extension service in the amount of \$375,000.

OTHER SUBSTANTIVE ISSUES

The WRRRI was originally authorized by the 1964 Water Resources Act and was one of the first institutes approved in the US. The overall mission of the WRRRI is to develop and disseminate knowledge that will assist the state and nation in solving water problems. Through the funding of research and demonstration projects, the institute utilizes the knowledge and experience of researchers throughout the state to solve New Mexico's pressing water problems. Research is conducted by faculty and students within the departmental structure of each New Mexico university campus. In-house staff administers the institute's programs, conducts special research projects, and produces a variety of issue reports.
