### **SECTION III: NARRATIVE**

#### **BILL SUMMARY**

##### Synopsis:

Senate Bill 193 amends Section 72-14-23B NMSA 1978. The bill proposes to increase the annual transfer from the New Mexico Irrigation Works Construction Fund (IWCF) to the Acequia and Community Ditch Infrastructure Fund (ACDIF) from \$2.5 million to \$5.0 million. The effective date would be July 1, 2025.

##### Background:

The IWCF was enacted in 1958 (Section 72-14-23) and authorizes the Interstate Stream Commission (ISC) to use funds for “the cost of investigations and construction as authorized in Section 72-14-11 NMSA 1978,” which states that projects are intended for the “conservation and use of water.”

The ACDIF was created in law (Section 72-14-24.1) by the 2019 legislature and the effective date was July 1, 2020. The fund consists of money transferred from the IWCF and interest accruing to the fund. Any unexpended or unencumbered balance remaining in the fund at the end of any fiscal year reverts to the IWCF. The ACDIF is administered by the Acequia Bureau at the ISC.

Monies in the ACDIF can be used for the following:

1. provide funding to acequias or community ditches for planning, engineering design or construction of irrigation works, and infrastructure projects, including dams, reservoirs, diversions, ditches, flumes or other appurtenances for the purposes of restoration, repair, disaster response recovery and hazard mitigation, improvement of irrigation efficiency and protection from floods; and
2. match or meet cost share requirements of other state and federal funding programs.

#### **FISCAL IMPLICATIONS**

Unused funds from the ACDIF revert to the IWCF. Increasing the transfer from the IWCF to the ACDIF from \$2.5 million to \$5.0 million annually will not directly affect the general fund. However, there may be implications for the budget of the ISC because the agency budget is funded in part with an annual transfer from the IWCF to the ISC budget. In the future, it will become necessary to reduce dependence of the ISC on IWCF transfers and replace that revenue with general fund monies.

As noted below, the ISC Acequia Bureau has managed between \$5 to \$6 million in project funding for the past three fiscal years. There is a demonstrated capacity to manage \$5 million in recurring funding for the ACDIF.

Note: major assumptions underlying fiscal impact should be documented.

Note: if additional operating budget impact is estimated, assumptions and calculations should be reported in this section.

## **SIGNIFICANT ISSUES**

SB 193 addresses the unmet needs of acequias and community ditches for planning, engineering design, and construction of infrastructure projects. There are an estimated 700 acequias and community ditches in 23 counties in New Mexico. Hundreds of acequias and community ditches statewide need repairs and improvements to efficiently convey irrigation water.

The need for acequia infrastructure funding is demonstrated by the high number of acequias requesting funding from the Acequia and Community Ditch Infrastructure Fund (ACDIF) at the Interstate Stream Commission (ISC). According to the annual workplans of ISC (which administers the fund through the Acequia Bureau with 5.0 FTE) during FY 2024, FY 2025 and FY 2026 the applications to ISC for ACDIF funding far exceeded the annual funding of \$2.5 million. In FY 2024, the ISC approved \$6.5 million for 42 projects. In FY 2025, the ISC approved \$5.8 million for 36 projects and in FY 2026, 5.58 million for 52 projects. The reason that ISC was able to fund a higher amount than \$2.5 million per year was because of special appropriations from the State Legislature to the ISC for acequia projects statewide

The NMAA has compiled data showing that the need for acequia infrastructure funding far exceeds the available resources. A total of unfunded Capital Outlay from FY26, 2025 ICIP project plans, and potential ACDIF FY27 applications is \$62,385,501.00. The amount needed to respond to disasters from 2025, which would help acequias recover and potentially meet the cost share requirements of federal disaster programs (75% federal/25% local-state) is estimated to be \$11,095,641.60. This amounts to over \$73 million in unmet needs.

The ACDIF can play a vital role in addressing needs for infrastructure funding. The fund is also valuable because of the orderly process used to administer acequia project funding and to prioritize acequia projects. The ACDIF is administered by the ISC through the recently created Acequia Bureau which as 5.0 FTE, two of whom have many years of experience with acequia projects. The ACDIF program is administered using agency guidelines developed in consultation with the New Mexico Acequia Commission (NMAC) and the New Mexico Acequia Association (NMAA).

Importantly, the ACDIF program has an annual funding cycle that starts with an application process that requires that applicants be in financial compliance with the Office of the State Auditor, that the acequia have valid water rights, and that other governance requirements are met (i.e. bylaws, EIN number, etc.). The ISC Acequia Bureau has two application processes, one for engineering design and one for construction. Only projects with a completed engineering design are eligible to apply for construction funding. Projects are required to be completed within one fiscal year. Because projects are fully funded, more projects are completed in a timely manner. This results in no incomplete projects and better overall outcomes for acequias as well as success metrics for the funding agency.

## **PERFORMANCE IMPLICATIONS**

Acequias and community ditches are facing aging infrastructure and many of the primary irrigation works are need repair, improvement, or replacement. In some cases, infrastructure in poor condition may place public safety at risk, particularly with the increase in flooding that is characteristic of climate change. In addition to the need for infrastructure improvements generally, acequias are also facing more frequent disasters, such as wildfires and post-fire flooding.

The cost of infrastructure repairs or improvements, generally or as part of disaster recovery, is beyond the means of acequias. Although acequias are political subdivisions of the state, they have no authority to levy taxes and therefore do not have a reliable revenue stream. They collect assessments but they are relatively small and cover only the cost of minor repairs.

A typical acequia infrastructure project, such as replacement of a diversion dam, can cost hundreds of thousands of dollars. Numerous acequias, approximately 150-200 at any given time, are seeking state and federal funding for infrastructure repairs and improvements.

Acequias and community ditches are facing devastating wildfires and flooding. This has become an almost annual occurrence among acequia communities with disasters such as the Hermits Peak Calf Canyon Fire, the Black Fire, the Rio Chama flash flood, and the South Fork and Salt Fires. More recently, flash flooding in 2025 damaged over 30 acequias in Rio Arriba and Santa Fe Counties. Disasters like these have destroyed miles of acequias, diversion dams, pipelines, flumes, and head gates leaving acequias inoperable for several years impacting the local economy.

ACDIF is a critical piece of match funding for federal disaster recovery efforts by the Federal Emergency Management Agency (FEMA) and the Natural Resources Conservation Service (NRCS), which both require a local match of 25% to the federal 75% match. ACDIF also provides non-disaster related federal match funding for funding programs provided by federal agencies such as the Army Corps, US Department of Agriculture, Natural Resources Conservation Service, and the Farm Service Agency.

ACDIF is administered by the ISC Acequia Bureau through a competitive grant process. Acequias and community ditches that are in compliance with state laws and regulations and that have qualified projects are eligible to apply for the ACDIF. There are two applications: one for engineering design and one for construction. Both applications require an acequia to have updated bylaws that complies with Chapter 73, Articles 2 and 3, NMSA 1978, proof of valid water rights, an Employer Identification Number (EIN), a bank account under their EIN that matches the legal name of the acequia, and proof of financial compliance with the Office of the State Auditor. This process ensures that an acequia is in full compliance with all state laws/regulations before any funding is disbursed so that no legal issue may stop the project and gets acequias into compliance with all applicable laws/regulations. ACDIF is developed as a multi-step infrastructure process. The first step is to get into compliance and apply for an engineering design application. Once an acequia obtains a stamped engineering design and maintains their eligibility, they are able to apply for construction funding at \$250,000 phases until the project is completed. ACDIF is a comprehensive application process that sets up acequias for success, gets them into compliance with all applicable state laws/regulations, phases out construction projects into manageable stages, and completes projects in an efficient and effective manner.

## **ADMINISTRATIVE IMPLICATIONS**

## **CONFLICT, DUPLICATION, COMPANIONSHIP, RELATIONSHIP**

## **TECHNICAL ISSUES**

## **OTHER SUBSTANTIVE ISSUES**

## **ALTERNATIVES**

## **WHAT WILL BE THE CONSEQUENCES OF NOT ENACTING THIS BILL**

If SB 193 is not enacted, acequias and community ditches will have a severe shortfall of available infrastructure funding. The ACDIF operates in a manner in which recurring, annual funding enables the ISC to manage the number of acequia applications in an orderly and timely manner by providing funding for a first phase of engineering design and a second phase of construction. This provides a higher degree of certainty to both the state and the acequias being served that their acequia infrastructure project can be completed in a timely manner, typically within two years. Without ACDIF, acequias will have an overreliance on Capital Outlay, where awards are typically inadequate to complete a project and where there is less oversight and technical support.

## **AMENDMENTS**

## Summary of Unmet Acequia Needs

Compiled by New Mexico Acequia Association

January 20, 2026

<b>Capital Outlay FY 2026 and ICIP 2025</b>	<b>Amount Requested</b>	<b>Amount Funded to Date</b>	<b>Unmet Need</b>
Capital Outlay FY 2026	\$19,112,334.00	\$4,237,875.00	\$14,874,459.00
ICIP 2025	\$55,643,779.00	\$11,632,737.00	\$44,011,042.00
		<b>Estimated Unmet Need for CO/ICIP</b>	<b>\$58,885,501.00</b>

<b>2025 Disasters</b>	<b>Total Estimate to Date</b>	<b>Amount Funded to Date</b>	<b>Unmet Need*</b>
Santa Cruz Flood 2025	\$2,764,386.85	\$0.00	\$2,764,386.85
Ojo Caliente Flood 2025	\$8,331,254.75	\$0.00	\$8,331,254.75
		<b>Estimated Unmet Need for 2025 Disasters</b>	<b>\$11,095,641.60</b>

*\*Note: Numbers for the disasters above are preliminary and incomplete. These figures do not include flooding in the Pojoaquin Basin in August 2025 nor future disasters.*
