

SECTION 8 ISR PROJECT GROUNDWATER PROTECTION

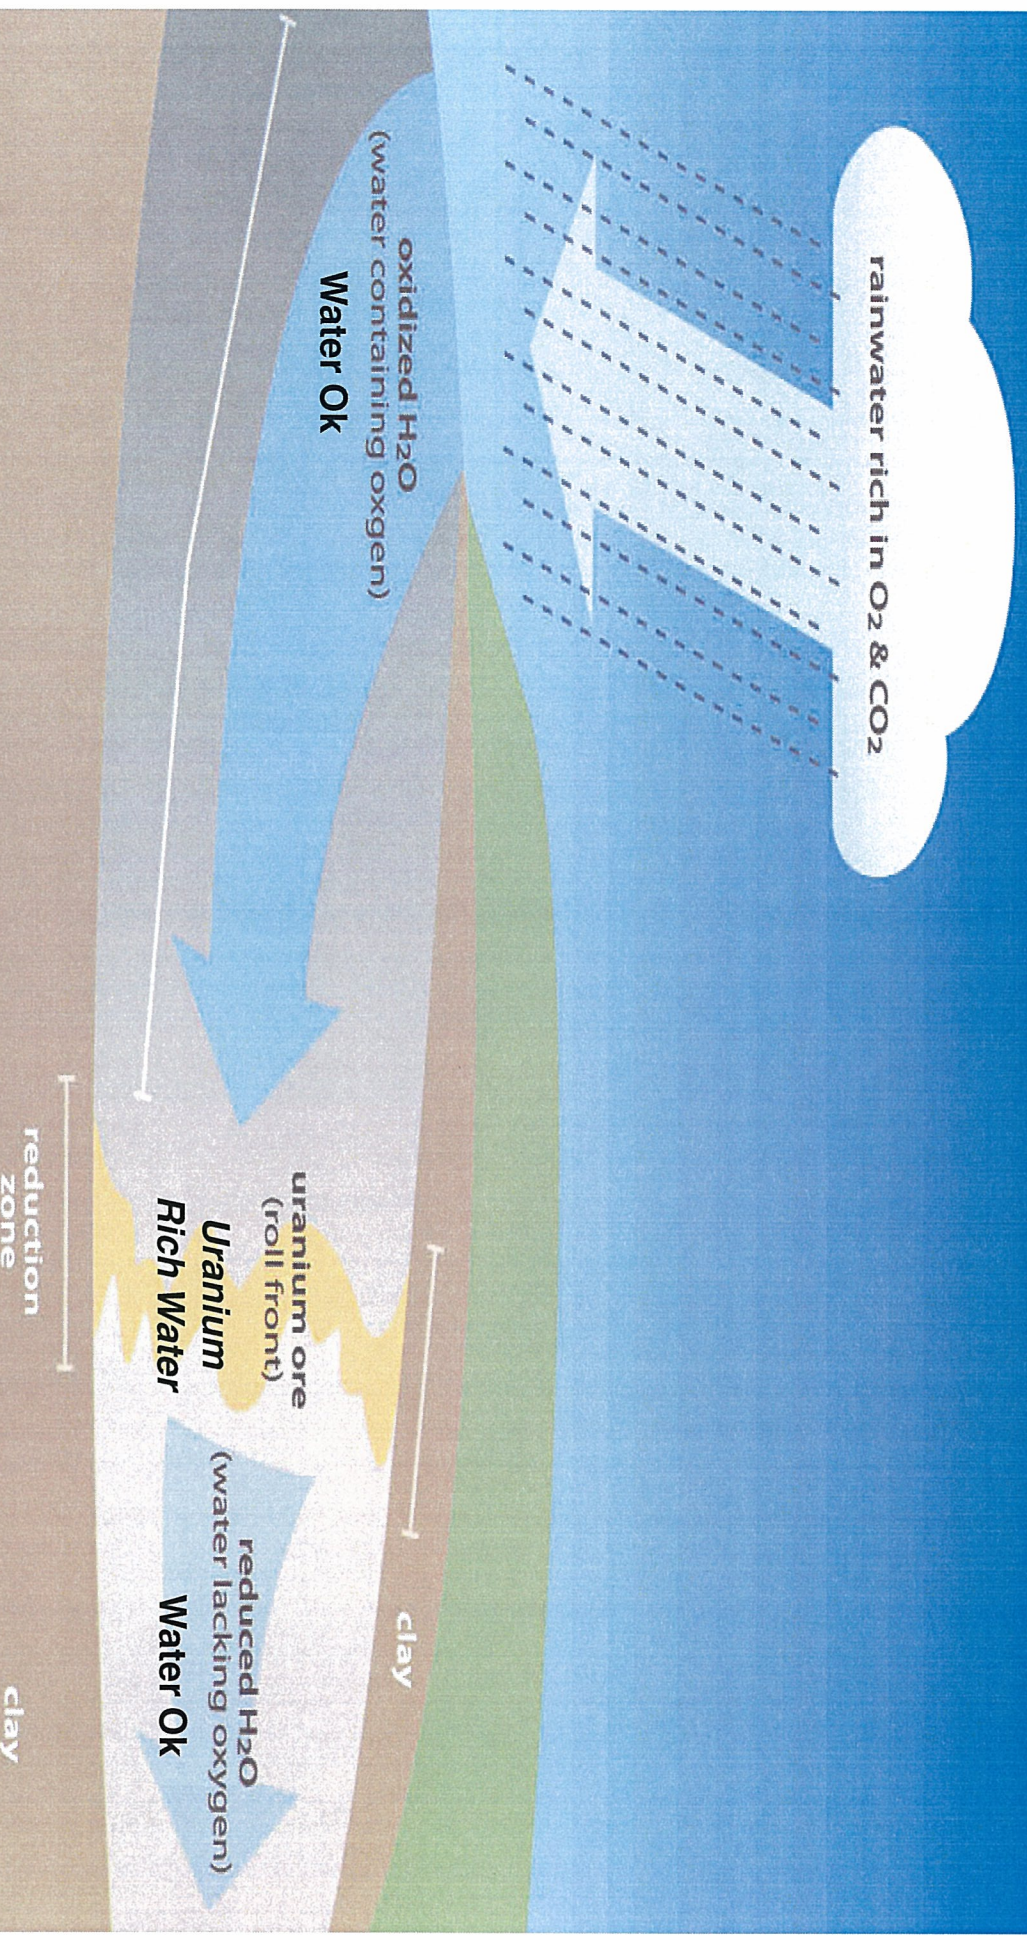

Presented By:

Daniel W. Erskine, PhD

October 2011

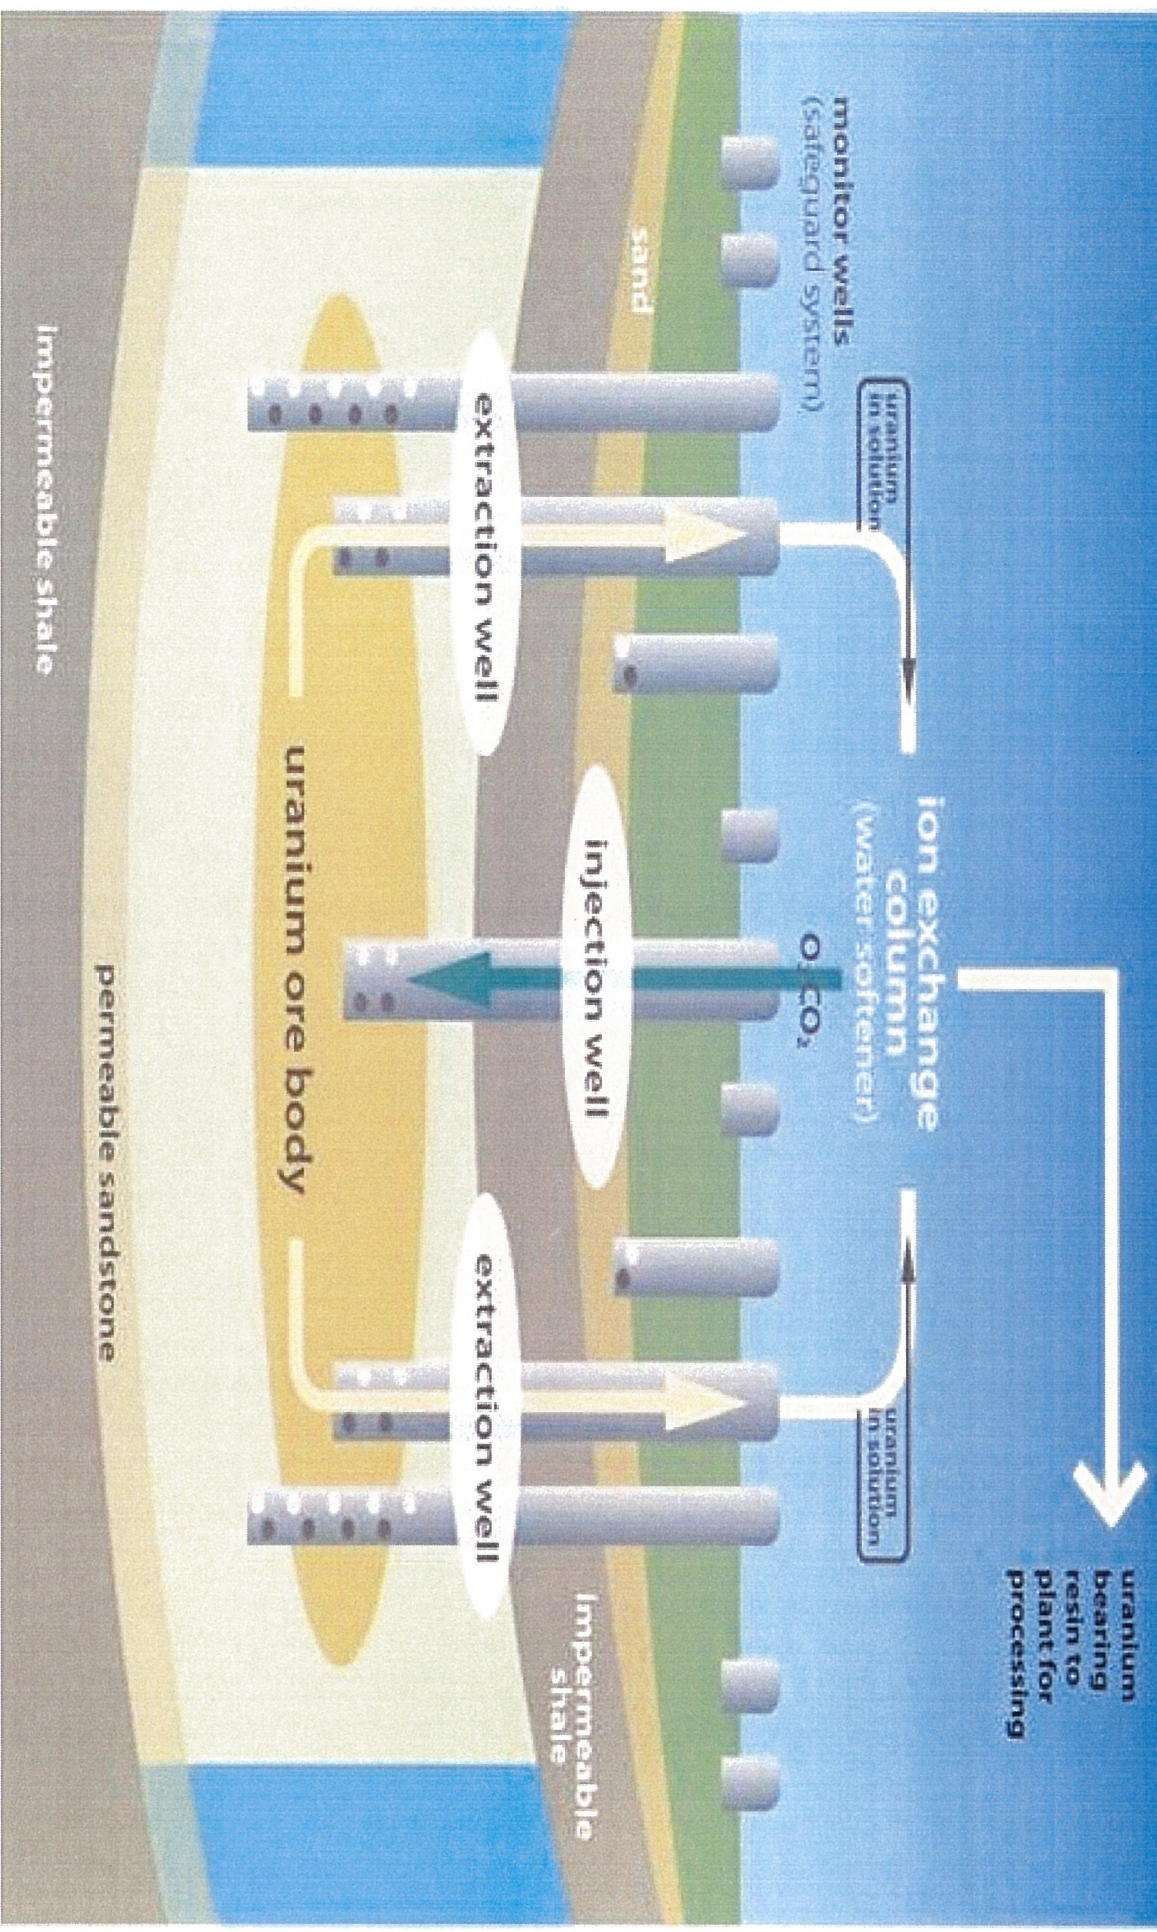

How Uranium Is Deposited (The Oxidation-Reduction Process)

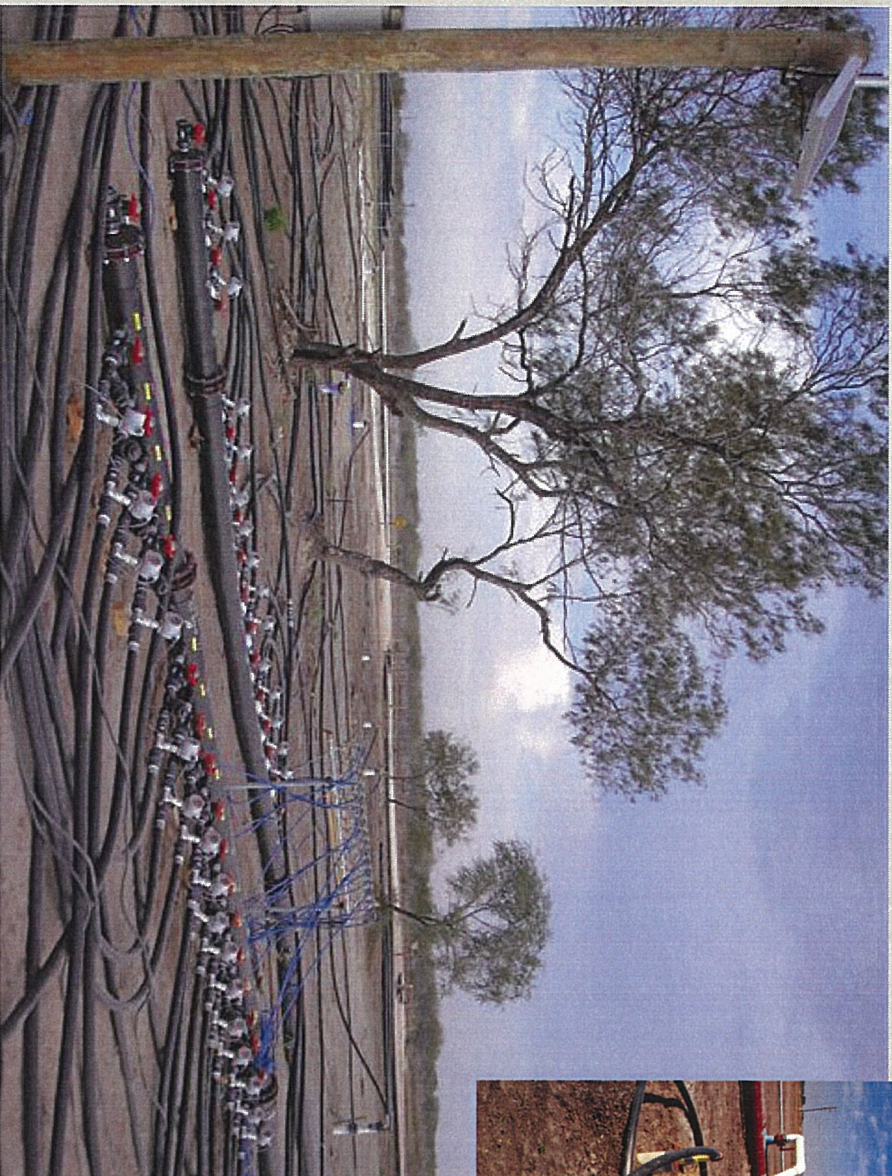

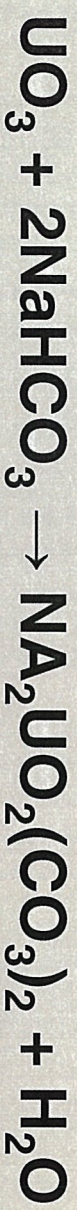

"Uranium is one of many elements that exist naturally within the layers of earth"

The In-Situ Recovery Process

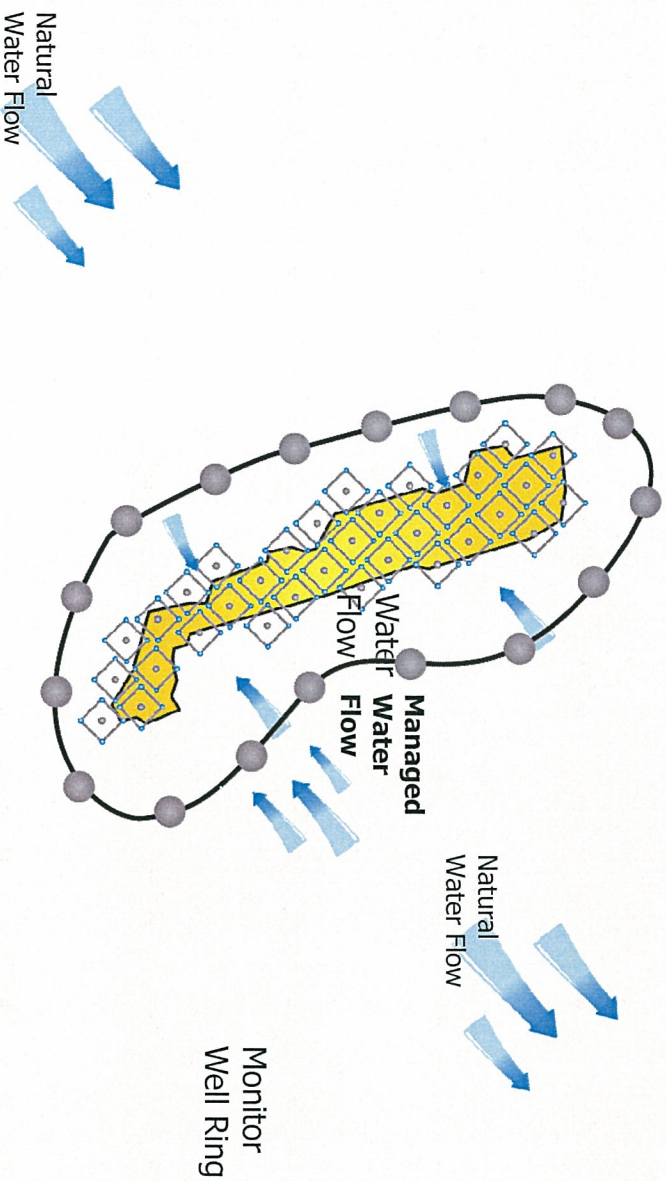

OXYGEN/CARBONATE INJECTION

“RUSTS” URANIUM₄ to URANIUM₆

ISR IS MANAGED AND PERFORMED LOCALLY

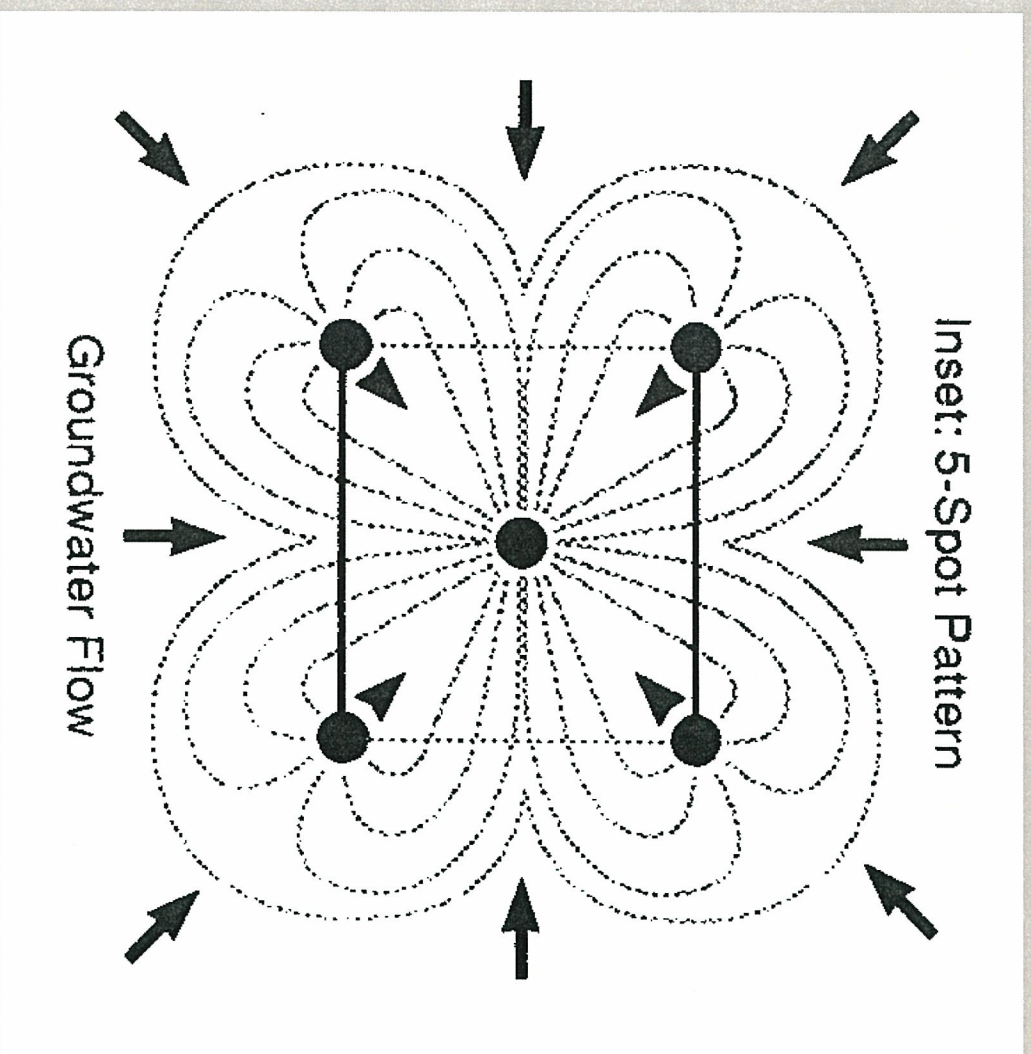

Monitor Wells to Injection Wells = 400'

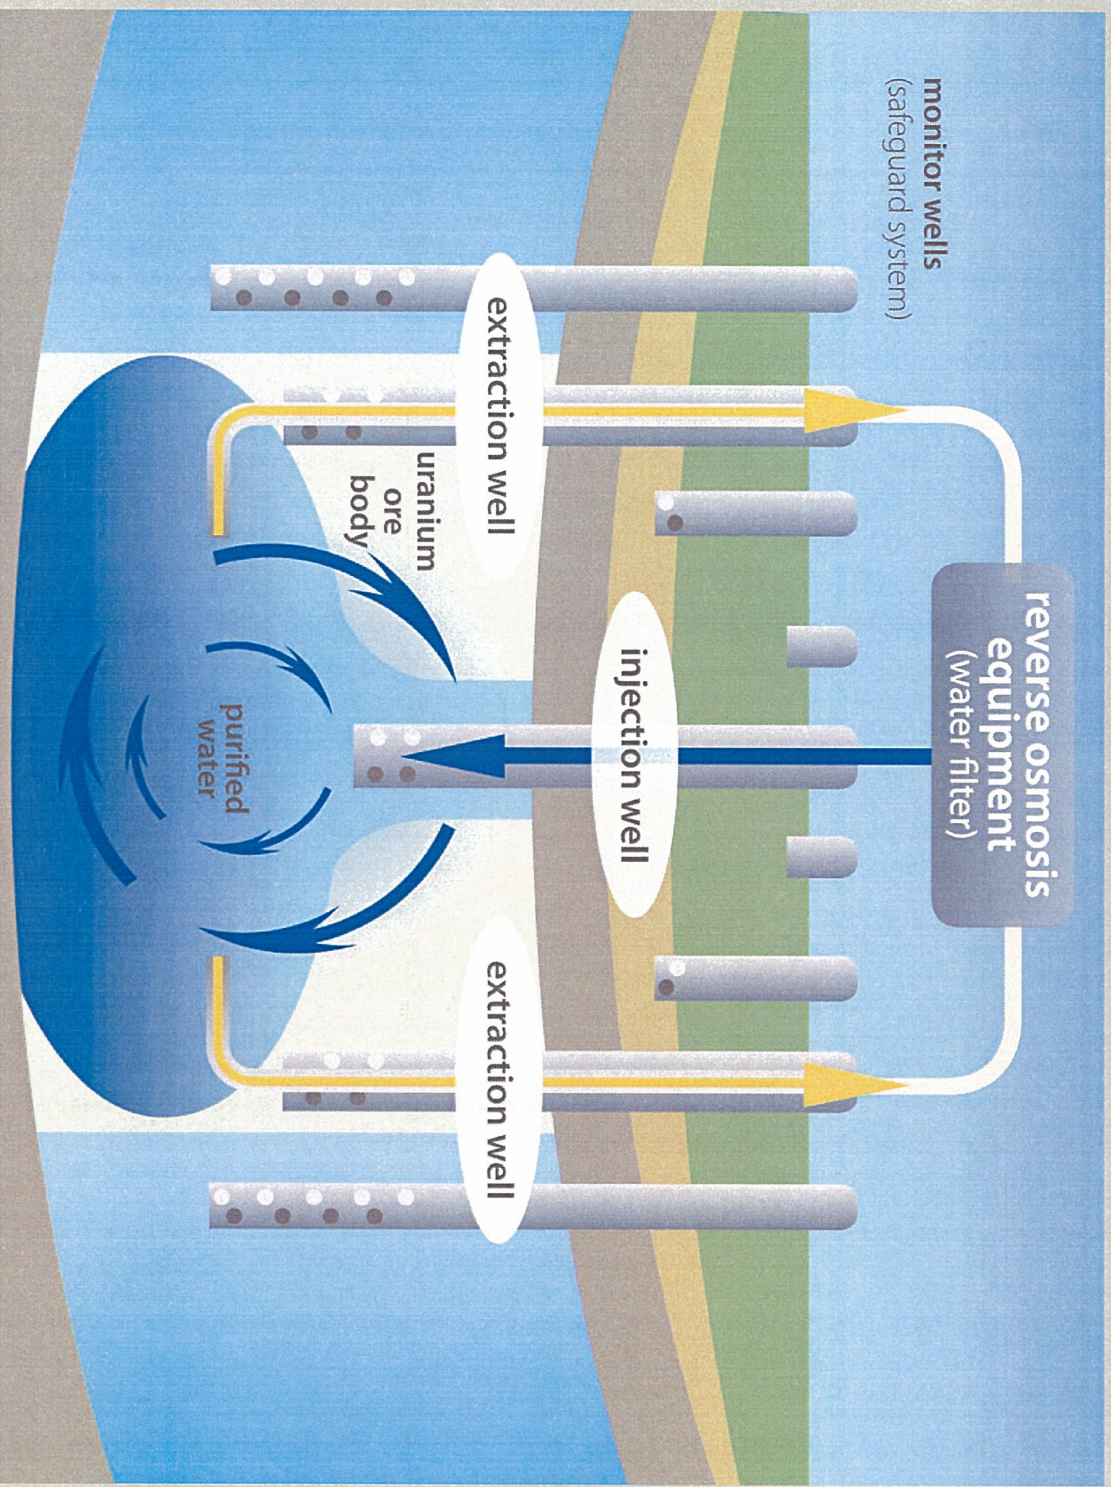

Property
Boundary

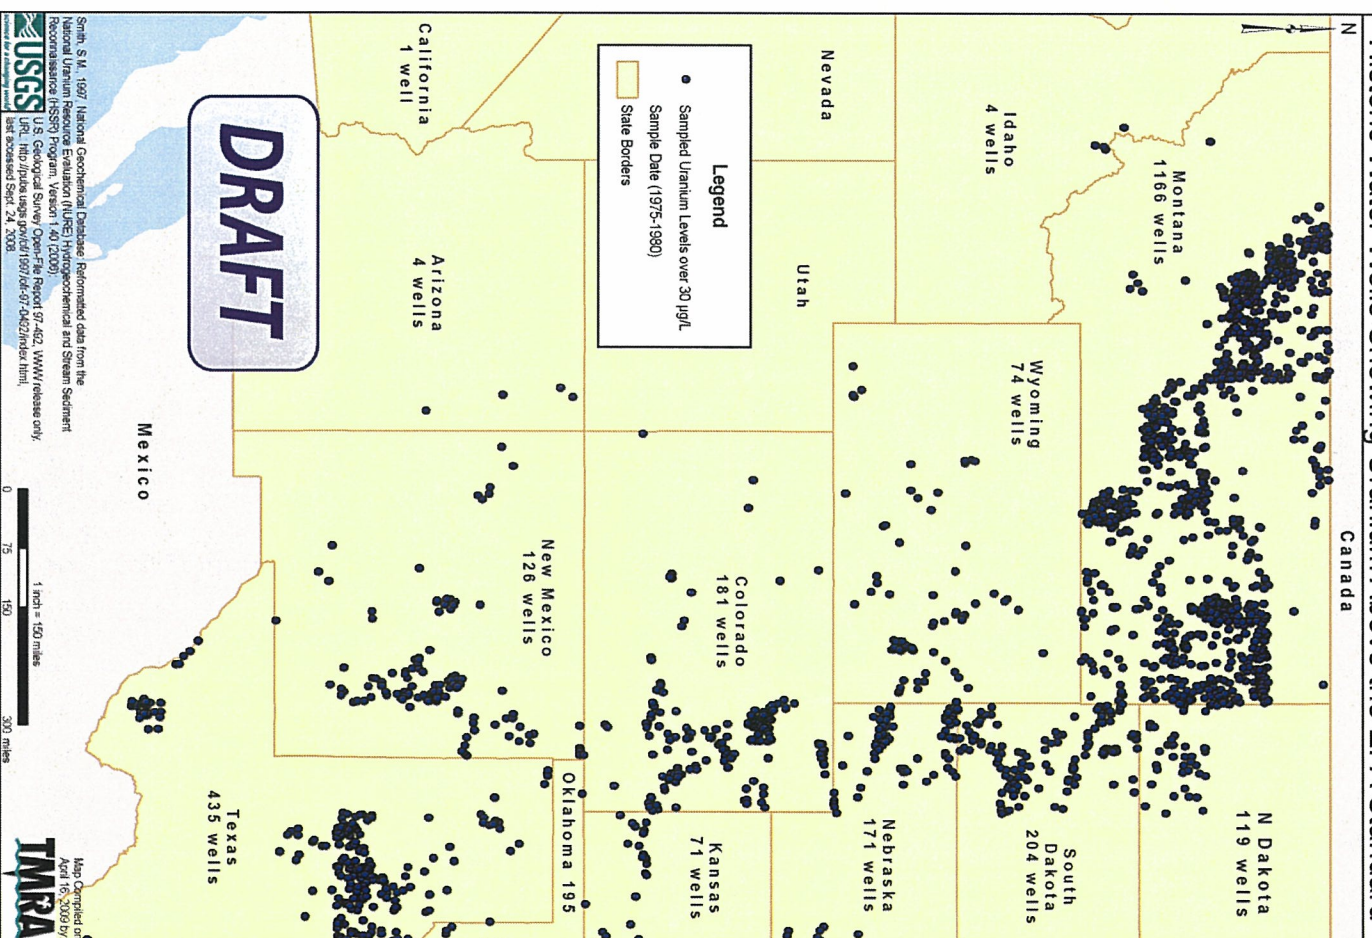

OVER PRODUCTION RESPONSE

GROUNDWATER RESTORATION REQUIRED

Historic Water Wells Showing Uranium Above the EPA Standard

HRI, INC
Churchrock Project
Section 8
MCKINLEY COUNTY, NM January 2011

1,684,000

1,685,000

Estimated ORE Boundary (Blue)

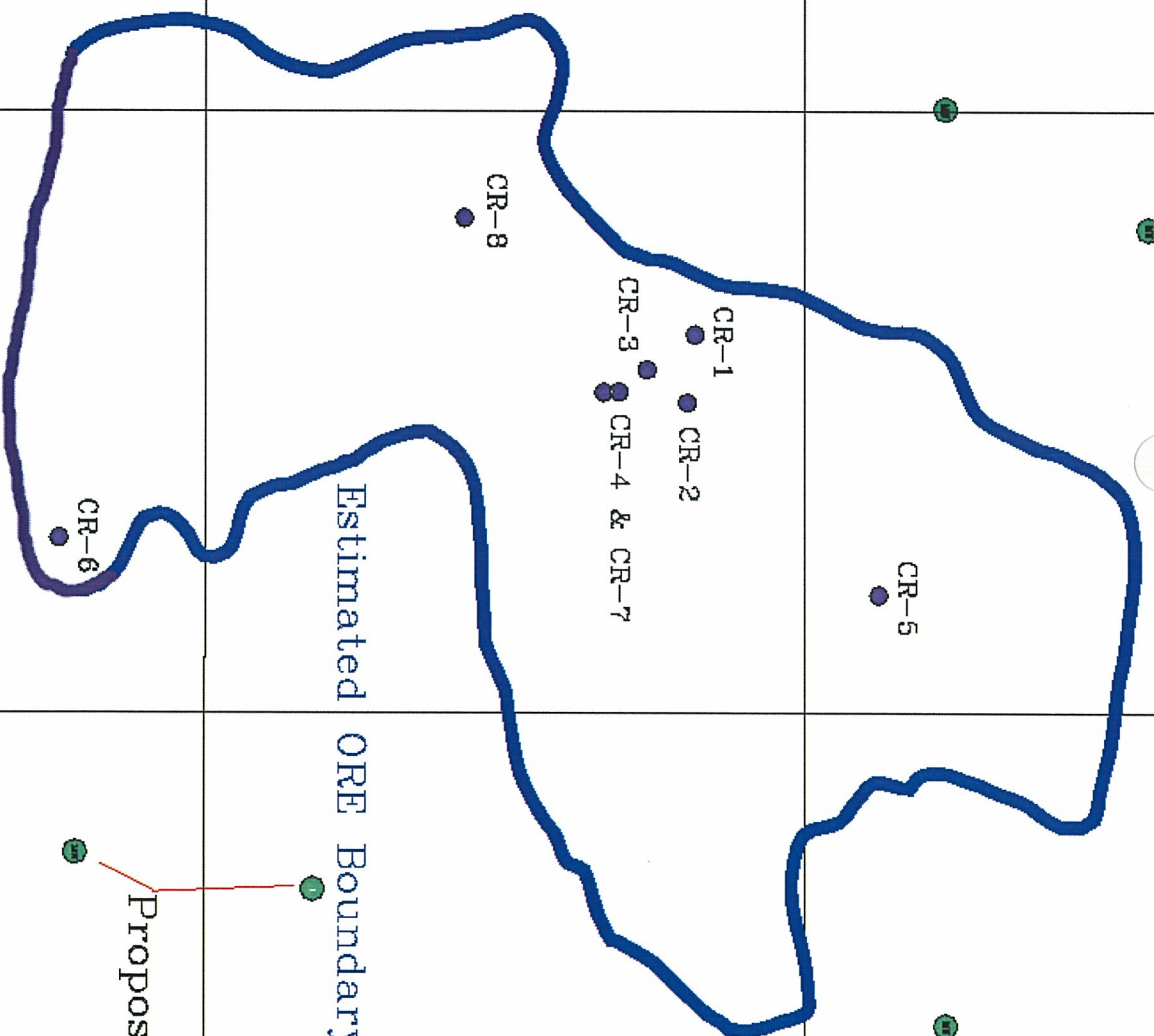

Proposed MW Well Ring

Scale
0 100 200

SECTION 8

SECTION 17

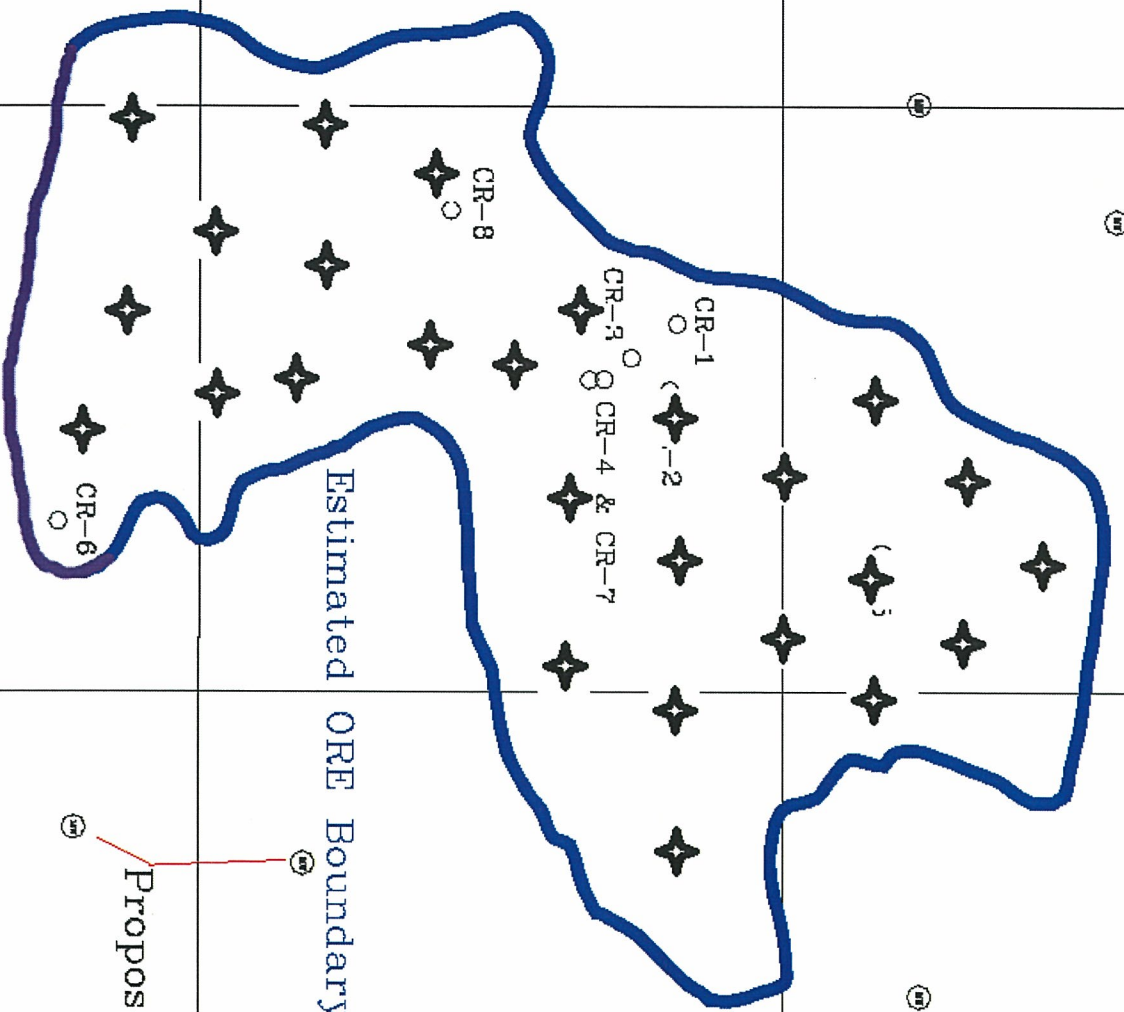

1,685,000

1,684,000

MCINTOSH COUNTY, NM January 2011

HRI, INC
Churchrock Project
Section 8

Estimated ORE Boundary (Blue)

Proposed MW Well Ring

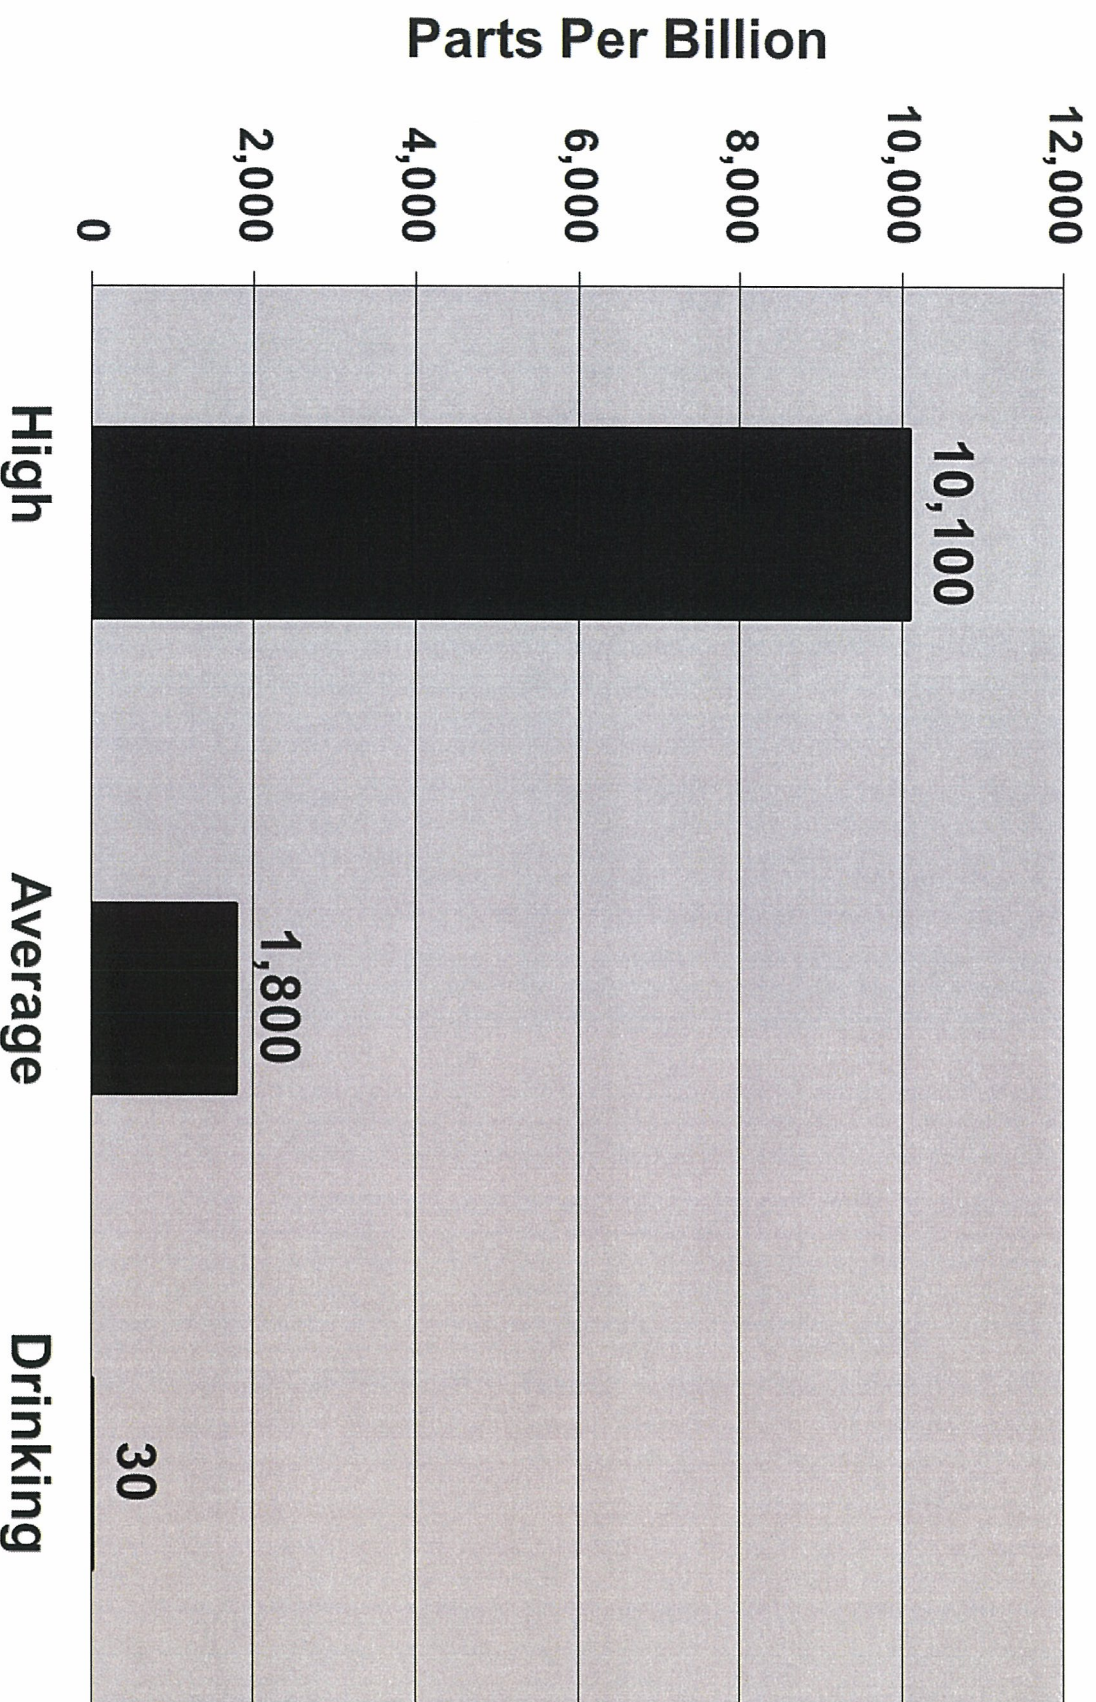

Scale
0 500 1000

SECTION 8

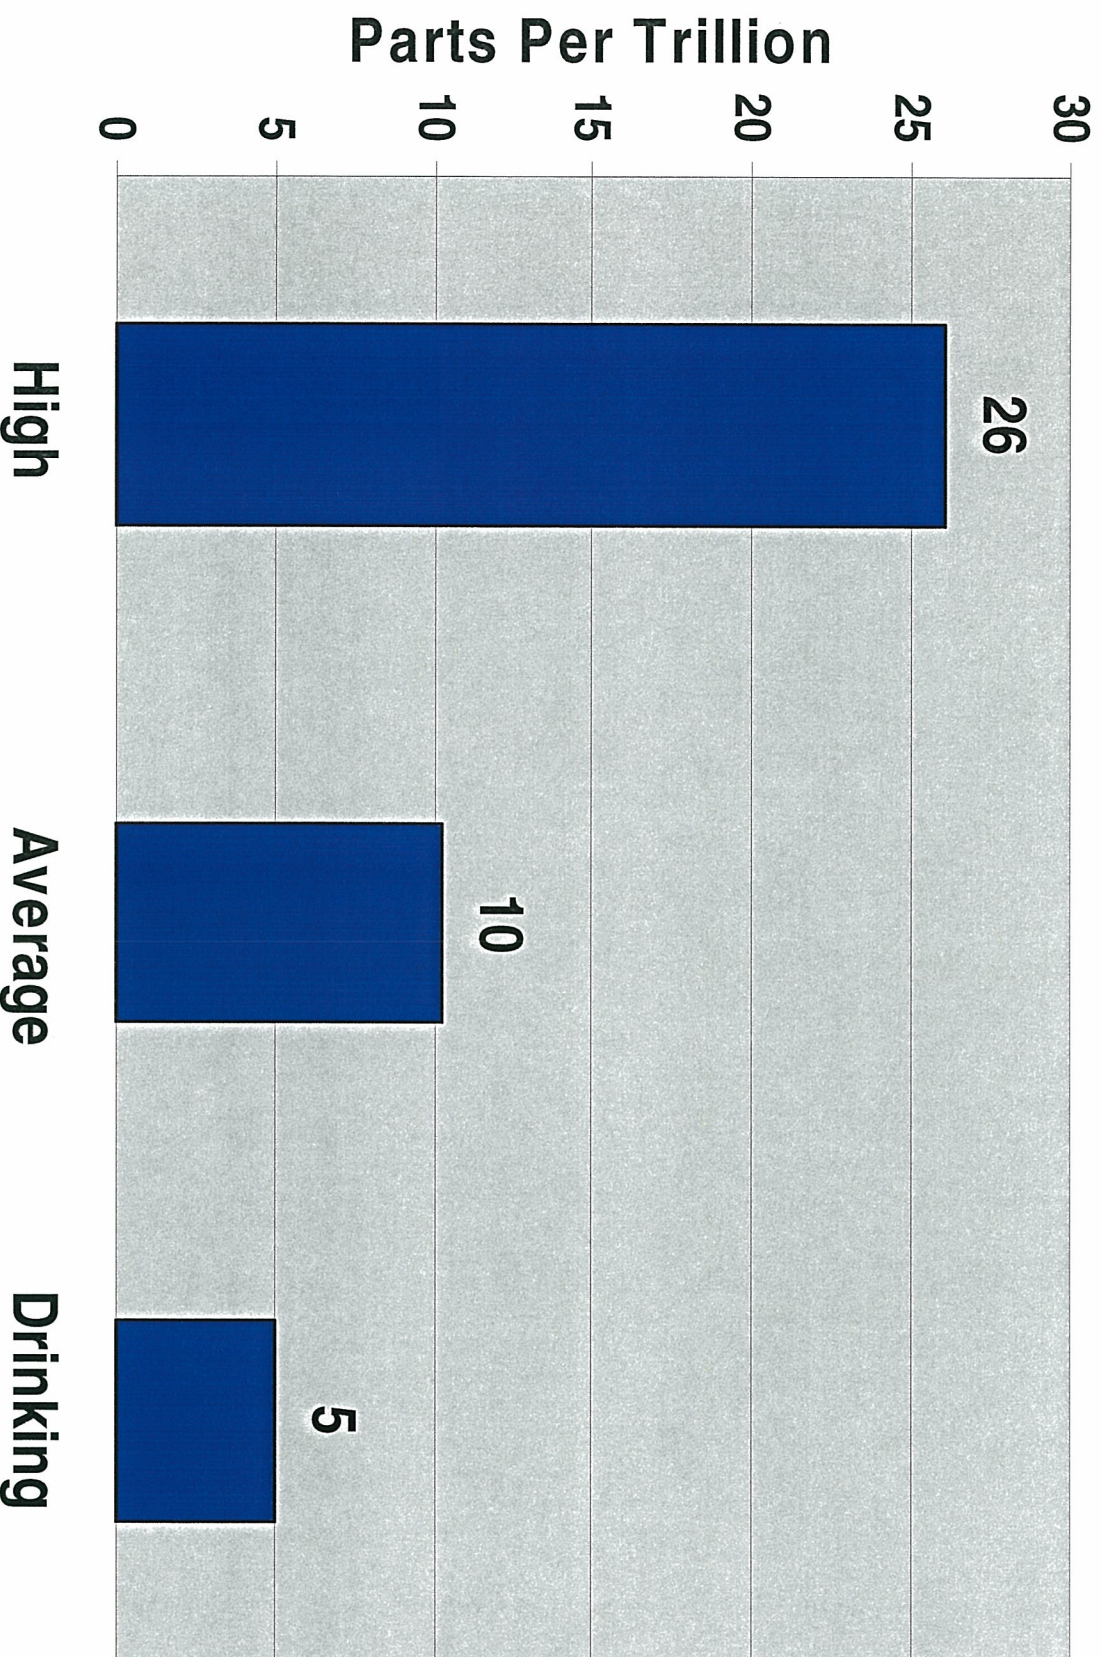

SECTION 17

Section 8 Uranium Concentration*

*Final Environmental Impact Statement Crowpoint Uranium Project

Section 8 Radium Concentration*

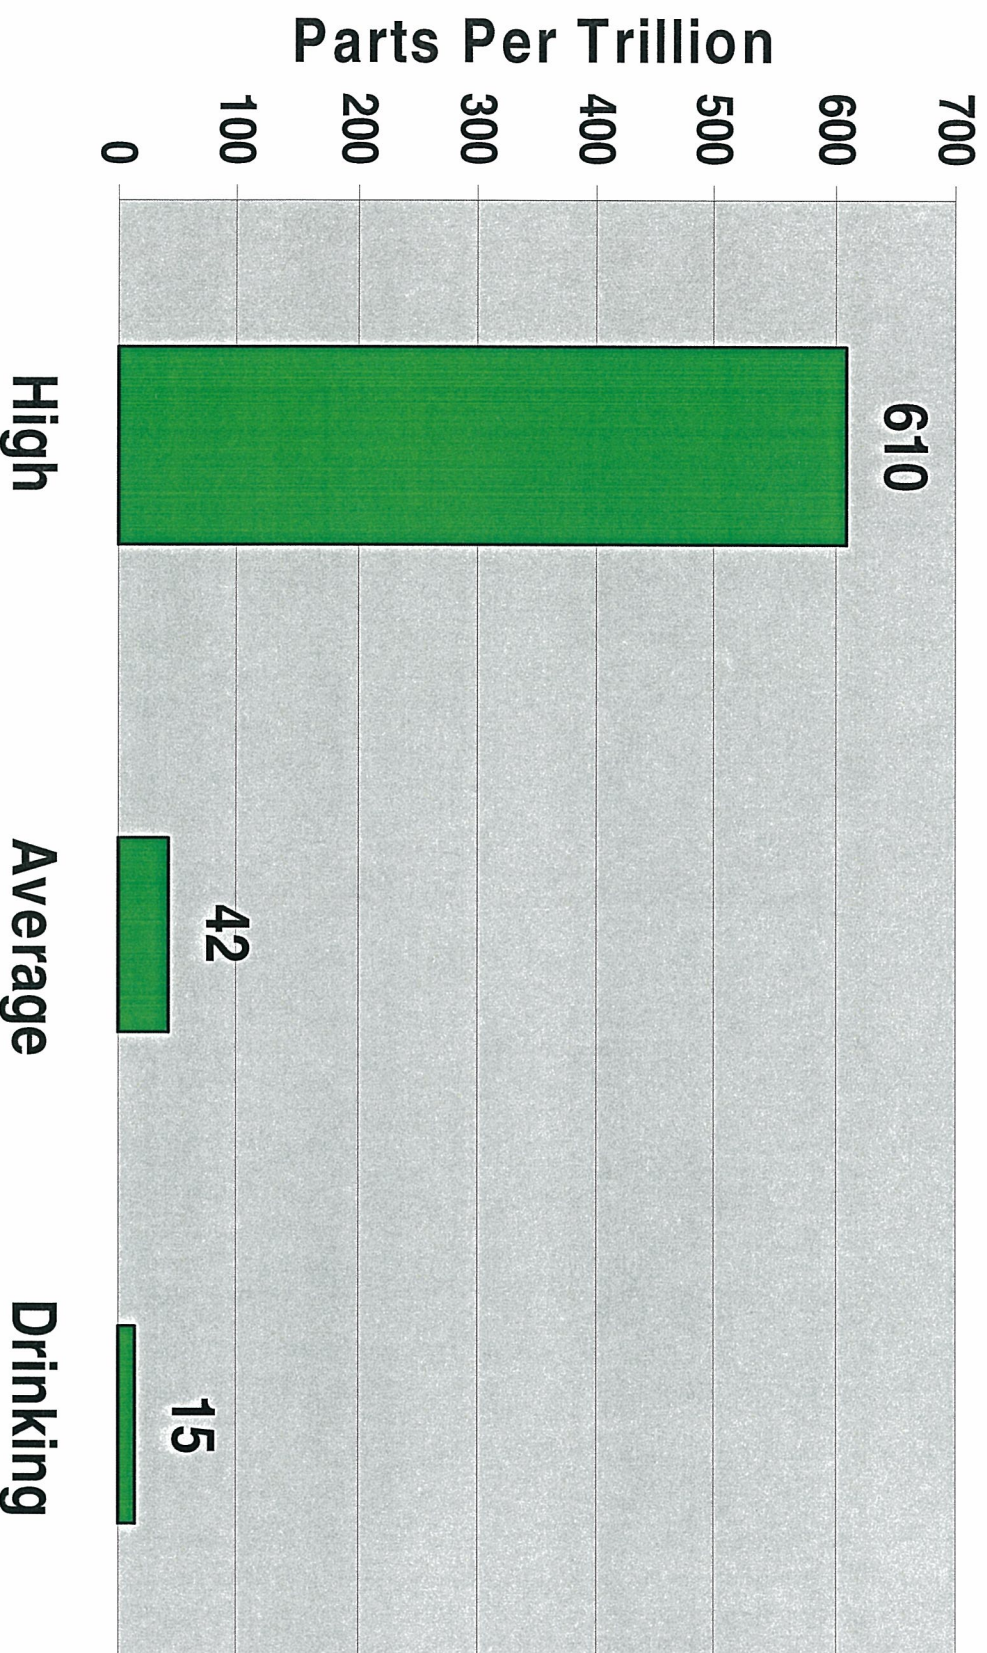

*Final Environmental Impact Statement Crowpoint Uranium Project

RANGE OF DATA IN THE ORE ZONE

- Baseline data is highly variable within the ore zone
- Groundwater within the ore zone contains constituents above the EPA Drinking Water Standard and should not be used for drinking
- Typically, the average concentrations of several constituents exceed drinking water standards
- The highest observed concentrations are often orders of magnitude higher than drinking water standards

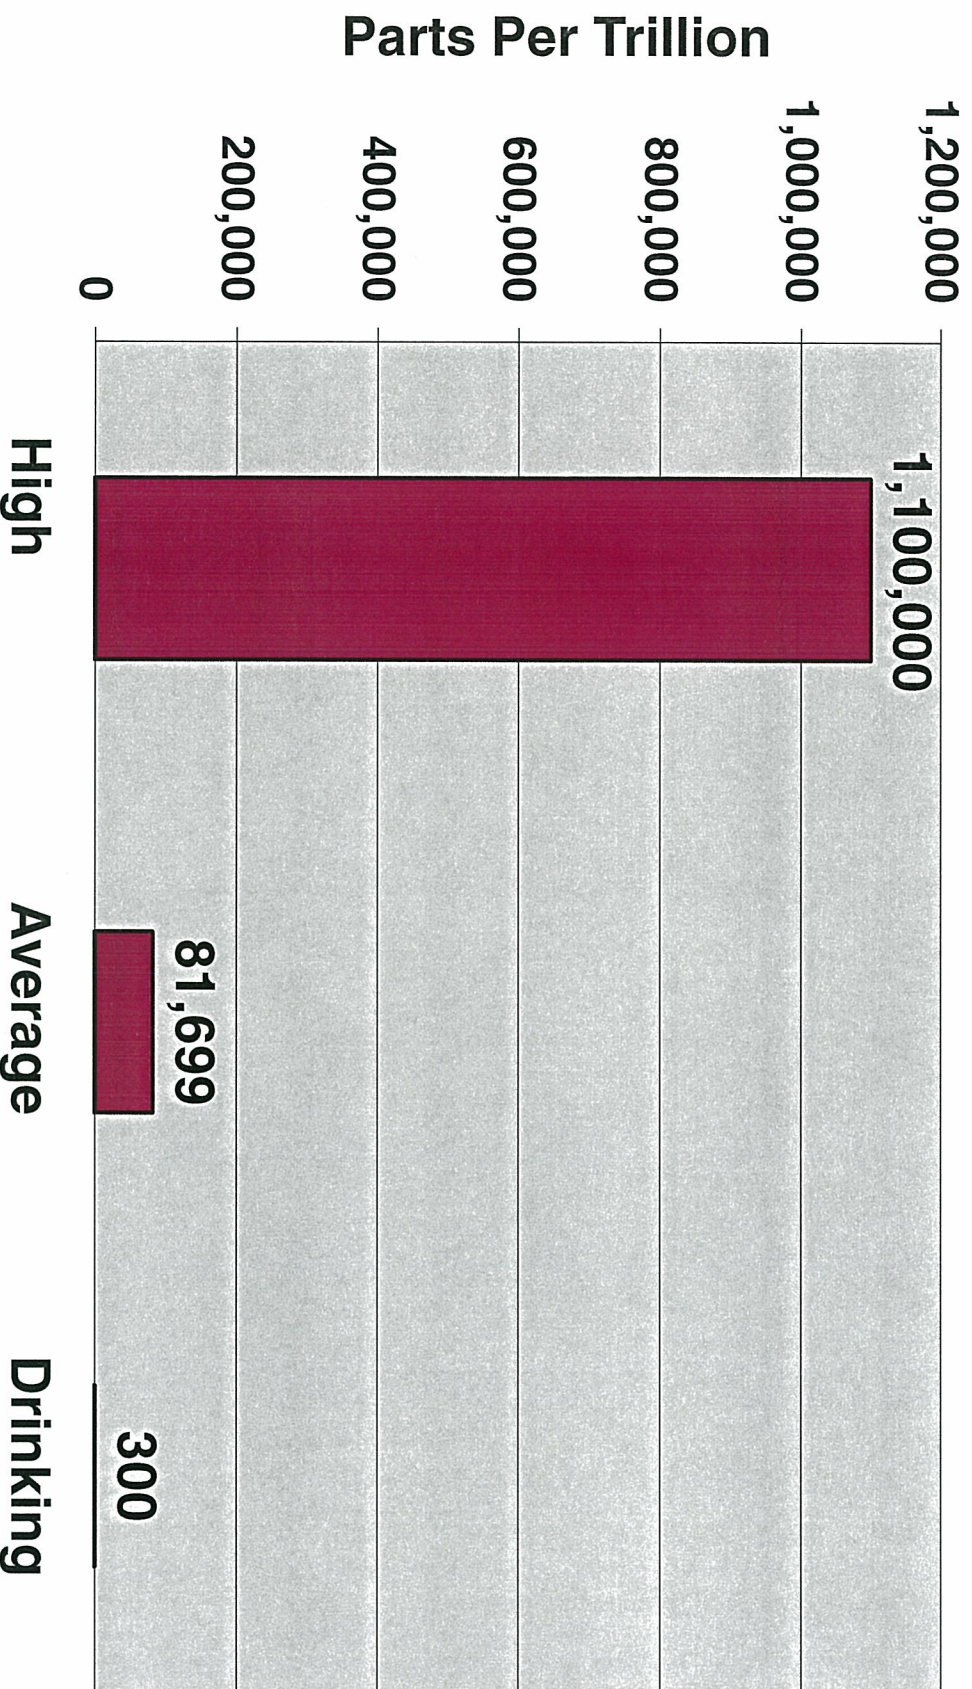

Crownpoint Unit 1 Gross α Radiation Concentration*

*Final Environmental Impact Statement Crownpoint Uranium Project

Crownpoint Unit 1 Radon Concentration*

*Final Environmental Impact Statement Crownpoint Uranium Project

URANIUM ROLL FRONT DEPOSITION
