

Health Security Results in Major Savings for New Mexico:  
\$1.6 Billion to \$2.7 Billion Health Cost Decrease from 2024 to 2028  
**and** Almost 100% of New Mexicans Have Secure Health Care Coverage

**In all four scenarios, the Health Security Plan costs less than the current system.**

“Over our five-year projection window, the HSP is projected to reduce health care spending in the state, although the extent of the reduction in spending depends on the scenario.”

– KNG Final Report, “Key Findings: Effects on Health Care Spending,” p. 48

Source: “Fiscal Analysis of New Mexico’s Health Security Plan: Final Report.” June 30, 2020. KNG Health Consulting. Figure 5.3, p. 49.

\*Baseline = Health spending under the current system (excluding non-civilian and over-65 populations).

\*\*Scenarios 1–4 = Health spending for New Mexicans covered by the Health Security Plan as well as for those with other coverage (excluding non-civilian and over-65 populations).

While health care costs are projected to continue to increase, they increase at a lower rate under Health Security.
