

Public Health Implications of Alcohol Use in New Mexico

Michael Landen, MD, MPH

State Epidemiologist

New Mexico Department of Health

October 23, 2018

Objectives

- Describe the burden of alcohol use in NM
- Provide reasons for why NM's burden remains #1 in the U.S.
- Describe key public health interventions
- Provide recommendations for reducing the burden of alcohol use in NM

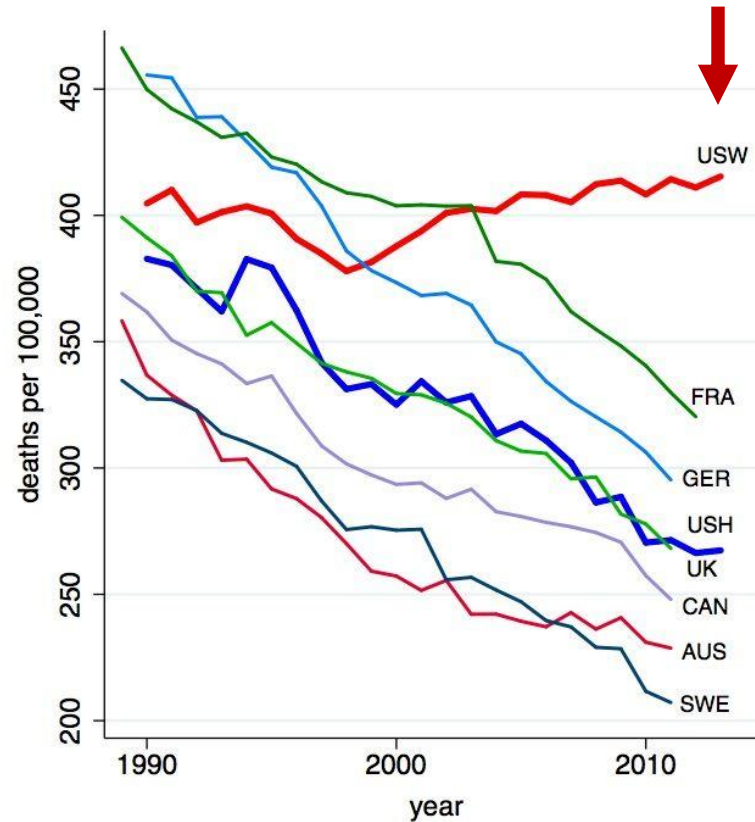

Impact on Health Status of NM

Mortality is rising among Middle-Aged White Americans

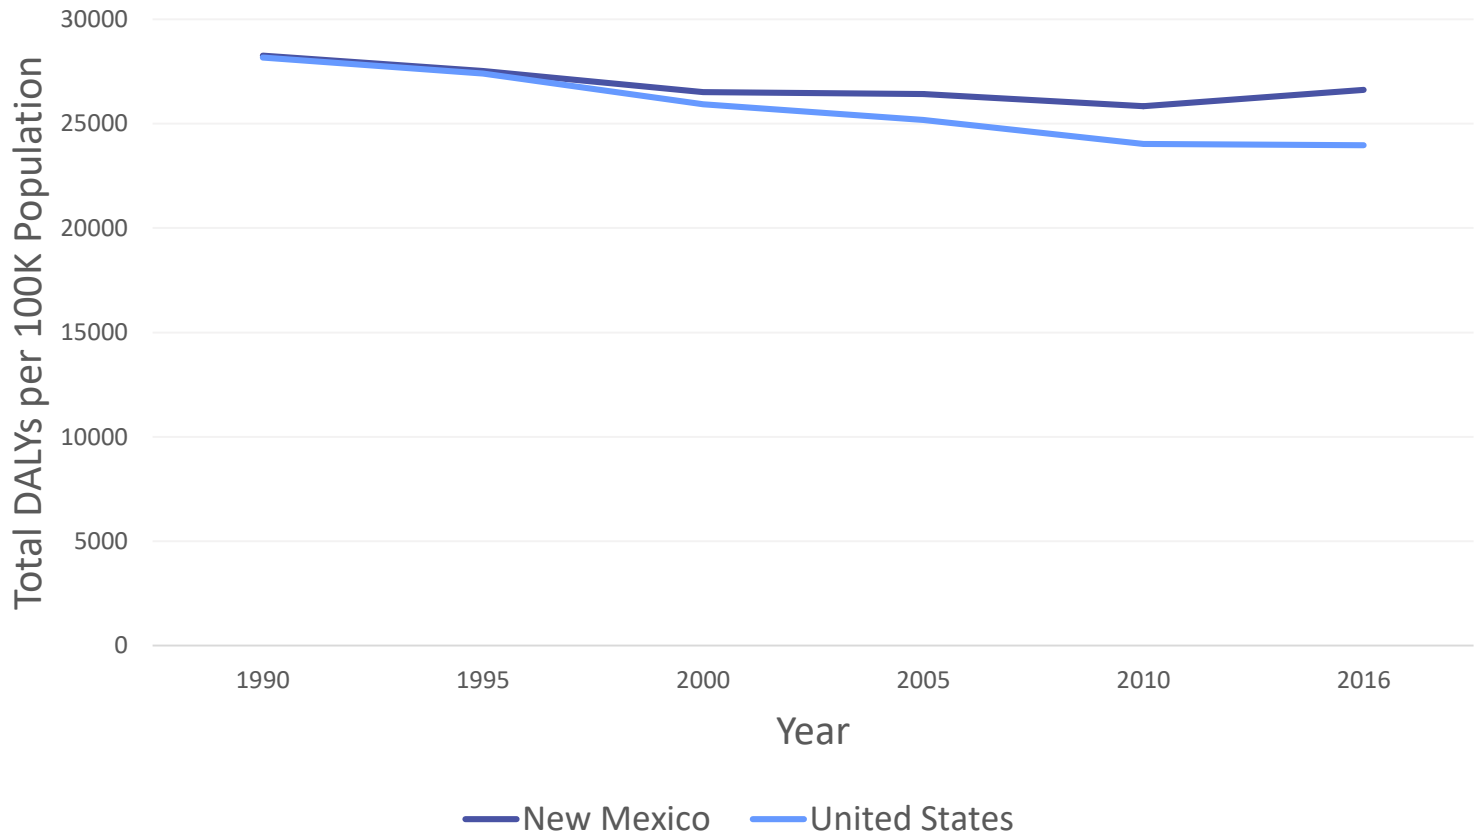

**Rx Drugs & Heroin
Suicide
Alcohol Poisoning
Driving Increase**

USW – US Whites UK – United Kingdom
FRA – France CAN – Canada
GER – Germany AUS – Australia
USH – US Hispanics SWE - Sweden

Case & Deaton. Rising morbidity and mortality in midlife among white non-Hispanic Americans in the 21st century, 2015.

Life Expectancy from Birth by Census Tract Poverty Level*

New Mexico, 2012-2016

*Poverty level is the percentage of persons of all ages in the decedent's census tract living at or below 100% of Poverty.

Rates have been age-adjusted to the standard U.S. 2000 population.

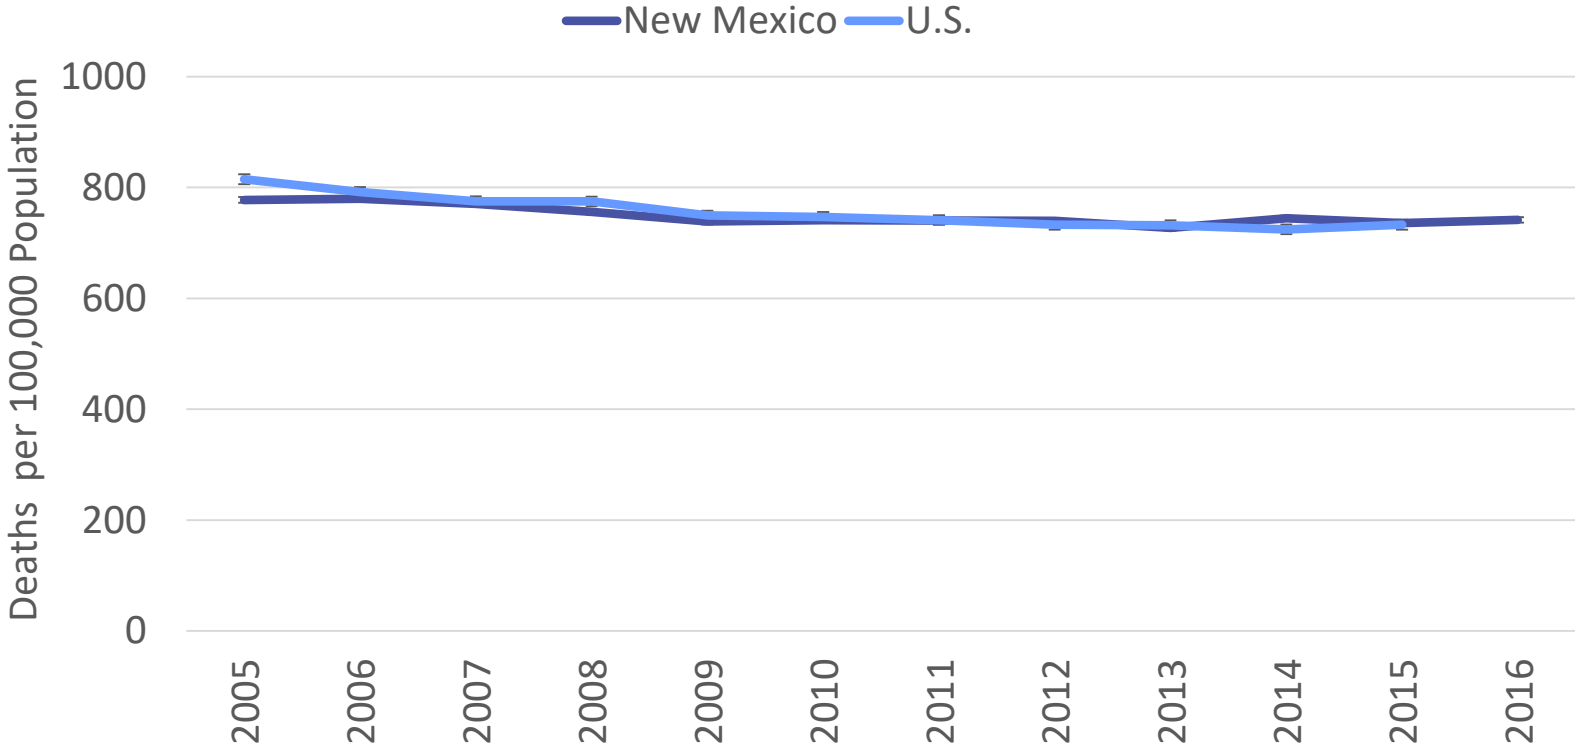

Life expectancy calculated by methods retrieved from: <http://ibis.health.state.nm.us/resources/LifeExp.html>.

Alcohol-Attributable Death Rates by Region

New Mexico, 2013-2017

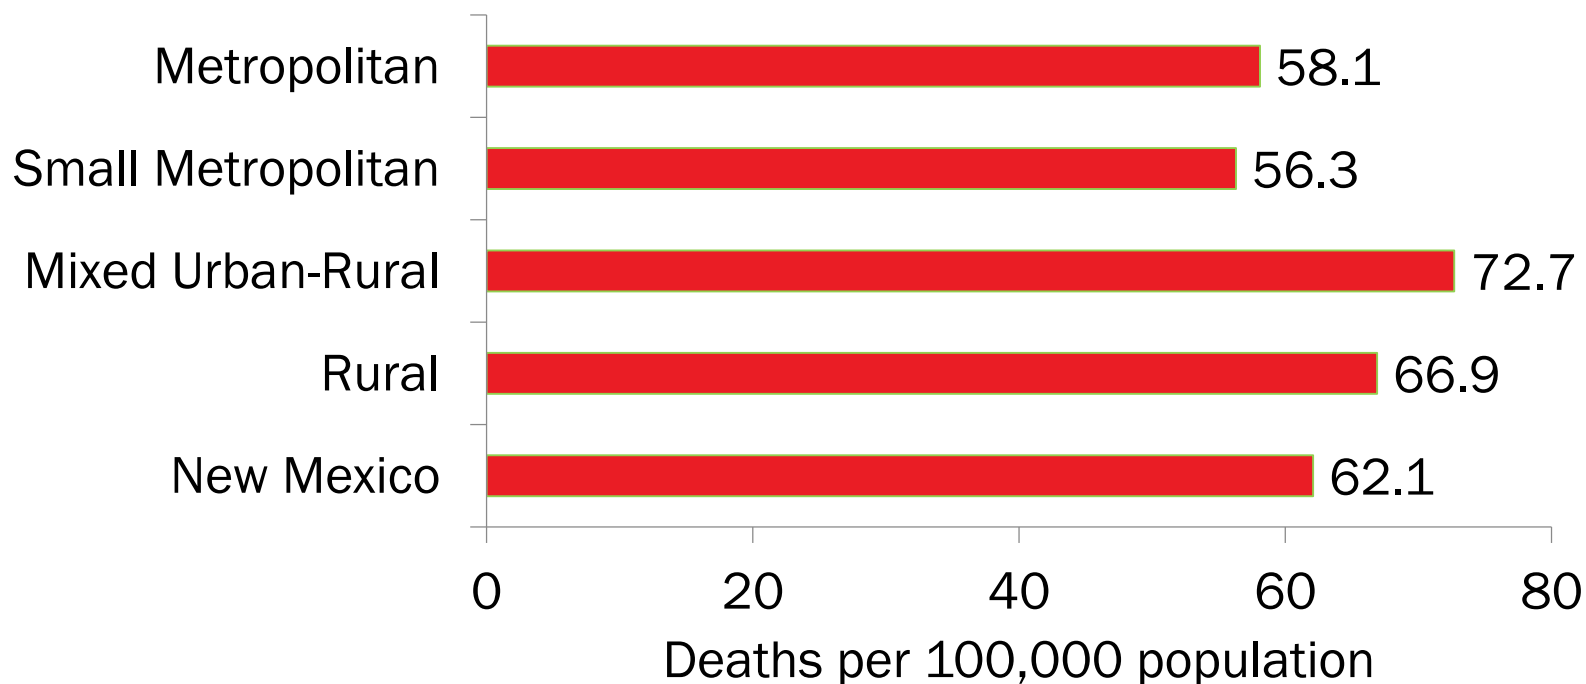

Data Sources: NMDOH BVRHS; UNM-GPS; IBEB SAES; CDC ARDI

Rates are age-adjusted to the 2000 U.S. standard population

Alcohol-Attributable Death Rates by Rural/Urban

New Mexico, 2013-2017

Data Sources: NMDOH BVRHS and IBEB SAE; CDC ARDI
Rates are age-adjusted to the 2000 U.S. standard population

Alcohol Related Death Rates by Census Tract Poverty Level*

New Mexico, 2012-2016

*Poverty level is the percentage of persons of all ages in the decedent's census tract living at or below 100% of Poverty. Alcohol related deaths are defined by ICD10: Alcohol-related deaths include deaths that are partially attributable to alcohol as well as 100% attributable alcohol-induced deaths. For more information, visit the CDC Alcohol-related Disease Impact (ARDI) software page: <http://www.cdc.gov/alcohol/ardi.htm> Rates have been age-adjusted to the standard U.S. 2000 population.

Ambivalence or Aggressive Action

Alcohol or Opioids

Smoking-attributable, Alcohol-attributable, and Drug Overdose Death Rates¹

New Mexico (2013-2017) and US (2016)

	New Mexico	U.S.	Rate Ratio
Smoking-attributable death rate ²	96.2	104.9	0.9
Alcohol-attributable death rate ³	62.2	34.0	1.8
Drug overdose death rate ⁴	24.6	19.8	1.2

¹Rates are deaths per 100,000 population, age-adjusted to the 2000 U.S. standard population

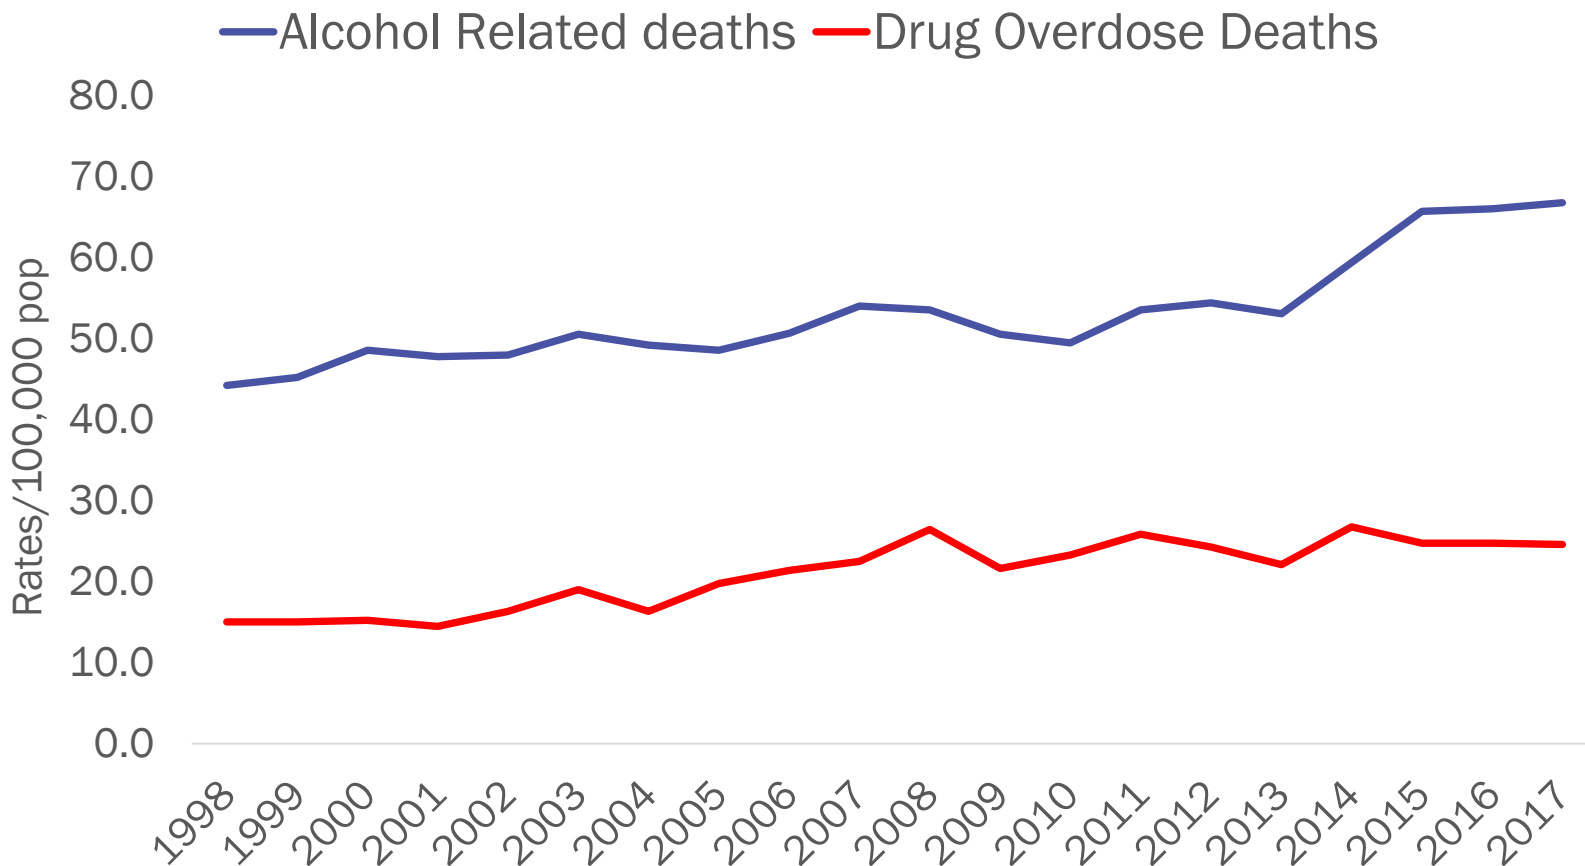

²Smoking-Attributable Mortality, Morbidity, and Economic Costs (SAMMEC), apps.nccd.cdc.gov/sammecc/index.asp, 2016 for US and 2013-2017 for NM

³Alcohol-Related Disease Impact (ARDI), nccd.cdc.gov/DPH_ARDI/default/default.aspx, 2013-2017 for NM and 2016 for US

⁴Defined as International Classification of Diseases, tenth revision (ICD-10) codes X40-X44, X60-X64, X85, and Y10-Y14, 2013-2017 for NM and 2016 for US

Total Alcohol Related & Drug Overdose Death Rates, New Mexico, 1998-2017

Data Sources: NMDOH BVRHS
Rates are age-adjusted to the 2000 U.S. standard population

Excessive Alcohol Consumption as a Public Health Concern

- New Mexico has one of the highest per capita costs of excessive alcohol use
- \$2.2 billion (\$2.77 per drink or an average of \$1,084 per person) in 2010
 - 41% of these costs were paid by government
 - 75% of these costs are from binge drinking

Sacks JJ, Am J Prev Med, 2015

Excessive Alcohol Consumption Definitions

- Binge drinking
 - ≥ 4 drinks per occasion for women or ≥ 5 drinks per occasion for men
- Heavy drinking
 - Defined as consuming ≥ 8 drinks per week for women or ≥ 15 drinks per week for men
- Any consumption by pregnant women or people younger than age 21

Binge Drinking is the Most Deadly, Costly, & Common Pattern of Excessive Drinking in the U.S.

≥4 drinks per occasion
for women and ≥5 for
men

54% of the
deaths due
to excessive
drinking

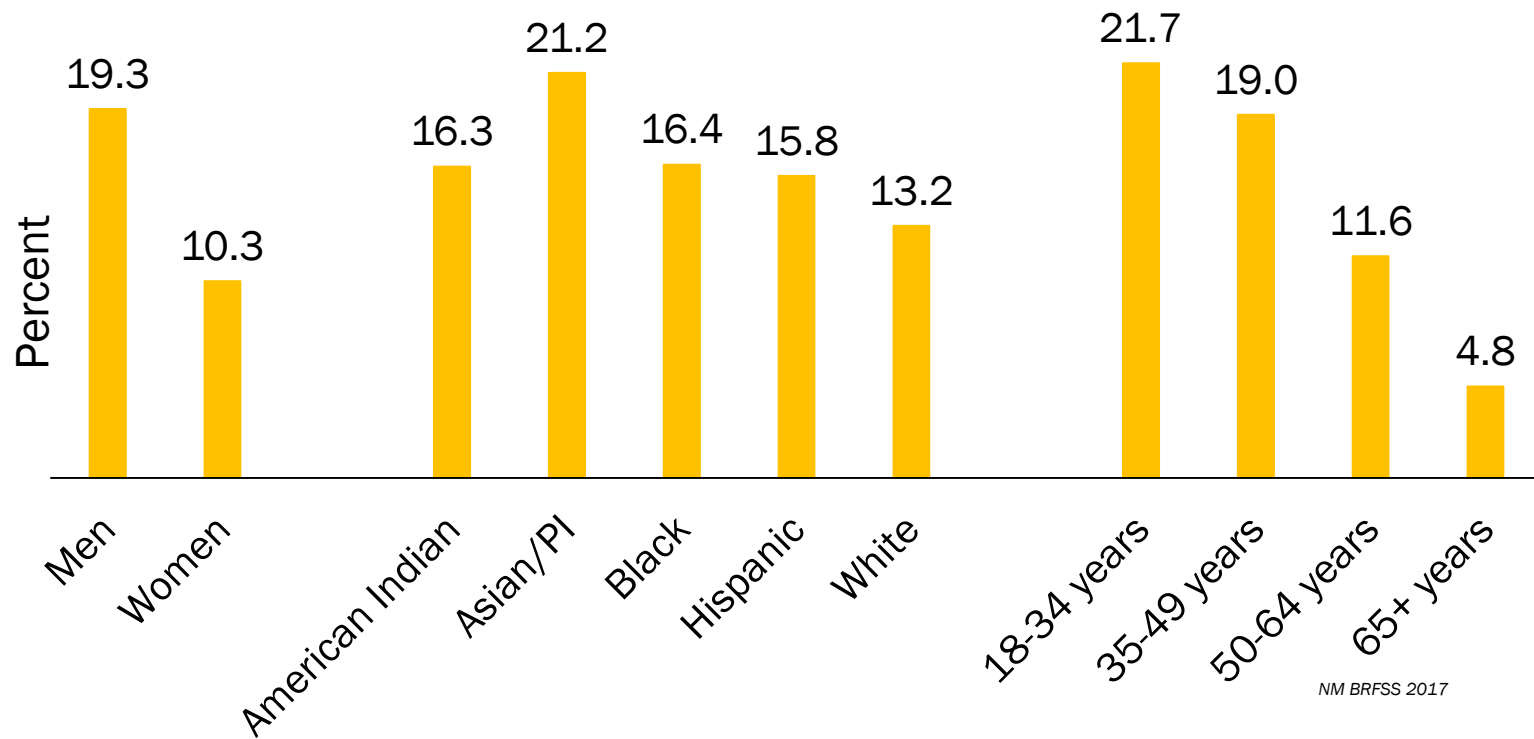

66% of the
Years of
Potential Life
Lost (YPLL)

77% of the
economic
costs

Decrease Availability

Decrease Consumption/Use

Decrease Morbidity and Mortality

Community Guide Recommendations for Preventing Excessive Drinking

- Regulate alcohol outlet density
- Dram shop (commercial host) liability
- Avoid further privatization of alcohol sales
- Increase alcohol taxes
- Maintain limits on days of sale
- Maintain limits on hours of sale
- Enhance enforcement of laws prohibiting alcohol sales to minors
- Electronic screening and brief intervention (e-SBI)

www.thecommunityguide.org/alcohol

Community Guide Findings on Alcohol Excise Taxes

- Increasing price by 10% would reduce overall alcohol consumption by about 7%.
- Tax increases are efficiently reflected in the retail price.
- Impact is proportional to the size of the tax increase.

Elder RW, et al. *Am J Prev Med* 2010 38(2) 217-229

Alcohol Screening and Brief Intervention (A-SBI)

- A-SBI can reduce the amount consumed on an occasion by 25% in those who drink too much
- United States Preventive Service Task Force recommendation
- Recommendation: Screen all adult patients
- 29% of adults in New Mexico reported that they had not been asked about the amount of alcohol they drink in the previous 12 months
 - 20% of binge drinkers had not been asked

NMBRFSS 2015; CDC Vital Signs, January 2014

DOH Activities

- One of 5 states with alcohol epidemiologist funding from CDC
- Working with health councils to include community guide alcohol prevention strategies
- Working with TRD to collect county level alcohol consumption data

Conclusions

- NM's health status is worsening with respect to that of the U.S.
 - For this to change alcohol-related death must decrease in NM
- There is ambivalence regarding addressing alcohol as a public health problem compared to opioids
- NM requires an aggressive policy agenda to address problem drinking

Recommendations

- Address alcohol like opioids
 - Utilize a public health approach
- Track and reduce alcohol consumption
- Create an alcohol and public health council
- Evaluate a change of the legal BAC
- Resources
