

LFC HEARING BRIEF

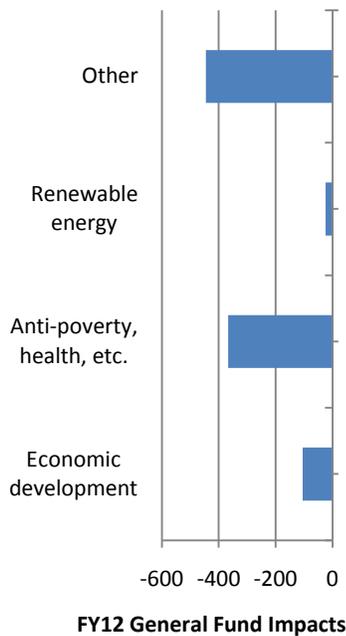

DATE: September 29, 2010

PURPOSE OF HEARING:
Review of New Mexico's Tax Expenditures

WITNESSES: Secretary-Designate Dorothy Rodriguez, Taxation and Revenue Department, Tom Clifford, Chief Economist, David Lucero, Principal Fiscal Analyst, LFC

EXPECTED OUTCOME:
Information and update on TRD tax expenditure budget work

Tax Expenditures
(\$ in millions)

BACKGROUND INFORMATION

Tax expenditures are government spending programs authorized through the tax code. Although tax expenditures are an important component of the state's annual budget, the state does not have a systematic means of reporting and analyzing their effects. Tax expenditures can be an efficient means of targeting selected populations for benefits, and also of influencing the decisions of private individuals to further the goals of public policy. However, in the current fiscal environment, a particularly troubling aspect of tax expenditures is that they function like entitlement spending, i.e. anyone who meets the statutory criteria may claim tax benefits. Thus the only way to control the outflow of revenue is to amend the statutes, and the state typically lacks the information needed to craft the appropriate amendments. Although many tax expenditures appear to violate the LFC's principles of good tax policy (see sidebar on page 2), their supporters point to their advantages in meeting other public policy goals. This argument indicates the need to evaluate each of these programs to insure that the foregone public funds are meeting the intended goals with a minimum of waste.

WHAT ARE "TAX EXPENDITURES"?

Tax expenditures are provisions of tax law that provide benefits to particular activities or groups through reduced tax liabilities. Tax expenditures are not limited to economic development incentives. Numerous provisions are designed to provide relief from poverty, sickness or other disadvantages, to encourage the use of renewable energy, or to provide other public benefits (e.g. food tax deductions). Tables 1 through 4 present lists of tax expenditures presently contained in New Mexico statutes along with estimates of the revenue foregone due to each provision. The following table summarizes these provisions. Total general fund revenue foregone in FY12 is estimated at \$941.1 million. As shown in Tables 1 through 4, local government revenues have been largely held harmless for these provisions, 92 percent of the total fiscal impact is felt by the general fund.

	Target of Expenditures	Number of Provisions	FY12 General Fund Impact (\$millions)
Table 1	Economic Development	20	(\$104.6)
Table 2	Poverty, Health, Education	30	(\$367.5)
Table 3	Renewable Energy	12	(\$24.5)
Table 4	All Other	34	(\$444.5)
	Total	96	(\$941.1)

LFC TAX POLICY PRINCIPLES:

Adequacy:

Revenue should be adequate to fund needed government services.

Efficiency:

Tax base should be as broad as possible and avoid excess reliance on one tax.

Equity:

Different taxpayers should be treated fairly.

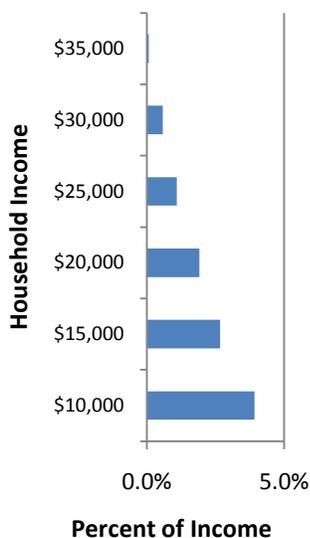

Simplicity:

Collection should be simple and easily understood.

Accountability:

Preferences should be easy to monitor and evaluate.

Low-Income Tax Relief: Single Parent, 1 Child

Combined benefits of LICTR, Working Families Tax Credit and the Low/Middle Income exemption.

Economic development: Tax expenditures in this category reduce General Fund revenue by \$104.6 million in FY12, with the Film credit accounting for \$70 million. Almost all of the state’s economic development tax expenditures have been created within the last 10 years. Many of the incentives have seen little activity.

Many states have increased their use of targeted economic development incentives in recent years. Such incentives may provide a relatively low-cost means of making the state a more attractive place for new investment. However, the state is seldom privy to all the information needed to determine how much incentive should be offered. In addition, targeted incentives create inequities within the tax code. These limitations suggest that the state should take a “go slow” approach on economic development incentives, and that a significant burden of proof should be expected from those who propose new incentives.

Anti-poverty, health care and education: Health care is targeted with \$220.7 million of the total \$367.5 million in tax expenditures in this category. The largest components are the Insurance Premiums tax credit for New Mexico Medical Insurance Pool (NMMIP) assessments (\$77 million), and the gross receipts tax (GRT) deduction for managed care medical services (\$75 million). The largest anti-poverty tax expenditures are the working families’ tax credit (\$45 million), the low/middle income personal exemption (\$30 million), low income comprehensive tax rebate (LICTR) (\$24 million) and the food stamp GRT exemption (\$20 million).

One concern raised by health care tax expenditures is that they deprive the state of funds that could be spent on health care and generate matching federal funds. Thus, the health care sector may not even be a net beneficiary from the tax breaks. Meanwhile, a “patchwork” of varying tax treatment has been created in which some providers and payments are given preferred treatment, and the fairness of the tax system is called into question.

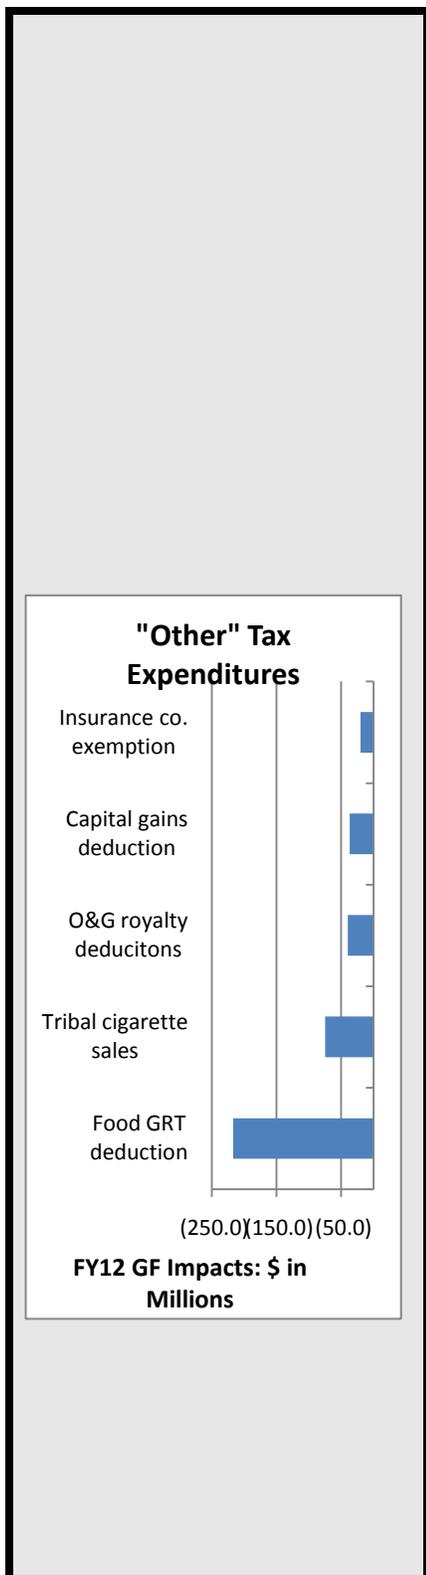

Through its LICTR, New Mexico has been an innovator in the use of the personal income tax to re-distribute income. These policies have been enhanced in recent years with the addition of the working families’ tax credit and the low/middle income personal exemption.

These policies play an important role in reducing the “regressivity” of the state’s GRT. Although the income tax is a relatively efficient means of delivering these benefits, they do impose an administrative burden on the tax department, which, if not addressed through staffing, could result in funds going to unintended beneficiaries.

Renewable energy and energy conservation: All of these tax expenditures have been created in the last 10 years. The largest is the renewable energy production tax credit at \$20 million per year. Actual claims have been lower than this amount in recent years because some taxpayers lack sufficient “tax appetite” to utilize all of their credits. However, taxpayers can carry unused credits forward to future years, so \$20 million is the total amount of credits the state could end up paying. Also, new projects are eligible for refundable tax credits so no liability is needed to utilize these credits.

Two concerns are raised by these tax expenditures. One is the lack of detailed information and analysis on the “bang for the buck” the state is receiving. Second, information is lacking on the interaction of these benefits with other subsidies and mandates. In addition to state tax benefits, renewable power investors may benefit from property tax relief, federal income tax relief and from subsidies paid by regulated utilities. In addition, regulated utilities may subsidize these investments through their regulated rate setting because they are mandated to generate specific portions of their power generation from renewable sources.

Other tax expenditures: Of the total \$444.9 million in tax expenditures in this category, \$217 million, or 49 percent, is due to the GRT deduction for food sold for home consumption. Some provisions in this category have been in place longer, dating back decades in some cases. Since the provisions in this category address varying purposes, it is difficult to generalize about their effects. It is clear, however, that their combined fiscal impact has grown to be very large.

Average Tax Rate	
(% of retail price)	
Gross receipts tax	7%
Motor vehicle excise	3%
Oil and gas taxes	8.5%
Hard minerals taxes	1% - 3%
Insurance premiums	3% - 4%
Liquor excise	7.5%
Cigarette	30%
Fuels taxes	6.6%

WHAT PREFERENCES¹ ARE NOT TAX EXPENDITURES?

Tax expenditures do not include provisions that define the proper scope of the tax base, prevent double taxation or avoid interference in interstate commerce. It is difficult in some cases to make these distinctions. For example, the 50 percent deduction for net capital gain income can be viewed as incentive to invest in New Mexico or as an attempt to reduce the taxation of inflationary gains, i.e. to define the proper tax base. Another example is the food GRT deduction, which has been excluded from the sales tax base in many states. Developing a tax expenditure list involves subjective judgments.

The broad-based nature of New Mexico’s gross receipts tax (GRT) means that many exemptions and deductions are needed just to limit the tax base to something closer to the retail sales taxes imposed in most other states. These are not tax expenditures. Examples include deductions for goods and services sold to governments and non-profit organizations. In addition, the broad base definition of the GRT would have the effect of creating double taxation either within the GRT or when combined with income taxes and other sales taxes. Many exemptions and deductions are needed to prevent such double taxation. Examples include the exemptions for wages, dividends and interest. These are not tax expenditures.

Similar issues arise in other tax programs. For example, S-corporations and other pass-through entities are not taxed under the corporate income tax. Since this is the same treatment as applied by the federal government and by most states, this is not considered a tax expenditure.

Table 5 attached presents a list of tax preference items that do not fit the definition of tax expenditure. Altogether 65 provisions have been placed in this category.

TAX RATE DIFFERENCES

The concept of tax expenditure is not easily applied to differences in tax rates. In part this is because there is no generally accepted definition of the “correct” tax rate for a particular program. The usual approach is to compare to tax rates in other states. This raises two problems: (1) Differences in the tax base definition; and (2) Different taxes play different roles in each state’s overall tax system. Comparing tax rates between tax programs – for example the motor

¹ The general term “preferences” is used to refer to all types of tax relief including credits, exemptions and deductions.

The process of appropriating should include a side by side analysis of line item expenditures and a comparison of foregone revenue.

Model Tax Expenditure Reporting States:

1. Oregon
2. Minnesota
3. Connecticut

vehicle excise tax rate vs. the GRT rate – must also be adjusted for tax base differences. Within a given tax program, different rates are sometimes applied to different industry segments, for example the oil and gas school tax rate on natural gas is 4 percent while the rate on crude oil is 3.15 percent. However, since there is no generally accepted definition of the correct rate, it isn't clear whether oil is taxed too low or gas is taxed too high. Finally, some goods – e.g. liquor and cigarettes -- are taxed at both the wholesale and retail level, so the combined effective tax on these items is larger than suggested by the wholesale tax rate alone.

TAX EXPENDITURE ACCOUNTABILITY

Spending through the tax code should be considered the same, or nearly the same as program expenditures. The difference between the two is that tax expenditures reduce revenues and generally bypass the annual legislative review process. Most often, tax expenditures are open-ended with respect to tenure and the amount of foregone revenue. Any review of tax expenditures is generally accomplished as a process toward generating a revenue projection.

For the most part, most tax expenditures start out with a specific public-policy goal – such as poverty reduction, tax payer equity, or job creation; however, once tax expenditures are enacted there is generally no agency held accountable, other than the revenue collecting agency, for the effectiveness of the program.

New Mexico, as part of the Accountability in Government Act (AGA), adopted performance based budgeting; however, tax expenditures were not a part of the AGA. Annual review of tax expenditures is necessary to ensure that they are effective, equitable, and accomplishing their intended purpose. Measuring revenue that is foregone alongside an agency's performance goals could improve statewide resource allocation, allowing for re-prioritization during difficult economic times.

Transparency of the tax code improves accountability by providing a complete picture of government spending and subsidies. Tax payers regularly want to know and participate in how their tax dollars are spent. In many cases, it is unclear who actually benefited from a given tax break and what unintended consequences many have occurred. Transparency also helps to avoid cross- agency or governmental subsidies to the same beneficiary – often characterized as corporate welfare.

Nine states do not regularly report tax expenditures:

1. Alabama
2. Alaska
3. Georgia
4. Indiana
5. Nevada,
6. New Jersey
7. New Mexico
8. South Dakota
9. Wyoming

Elements of a Good Tax Expenditure Report. Although the best practice would be to incorporate tax expenditures into the annual budgetary process, or appropriation bill; most states publish a separate tax expenditure budget report. A good tax expenditure report is a difficult undertaking. Calculating foregone revenue is only the first step. To answer questions like whether the expenditure is achieving its goals requires detailed analysis. Competing studies of the film tax credit's impacts provide an example of the difficulty of reaching a consensus on the results of such analysis. One of the most important requirements is that the report's authors be objective. Agencies or individuals with a vested interest in promoting a program will not provide a reliable assessment of program effectiveness.

Desirable features in a tax expenditure report include:

- a. Published often
- b. Comprehensive in scope
- c. Include detailed information; estimation methodology etc
- d. Include an analysis of the impact of each tax expenditure – is it effective, or worth the investment/ROI, and can it be benchmarked to what otherwise would occur
- e. Projected expenditures – what is forecast of the foregone revenue year-over-year and over five years, and grouped by budget category
- f. Historical figures
- g. Information about the distribution of the tax benefit
- h. An assessment of how well the tax expenditure works

Developing such a report will require that taxpayer beneficiaries provide more information than they do now, and that the Tax Department be authorized to release the information. In a recent presentation to the interim Revenue Stabilization and Tax Policy Committee, Mr. Jim O'Neill noted that the confidentiality requirements of the tax code could be a major limitation on the development of a tax expenditure report.² Thus, a balance will have to be struck between the need for public information and the taxpayer's need for confidentiality.

Next Steps. The Legislature can take immediate steps to incorporate sound budget policy principles into its review of tax expenditures. Some possible steps include:

- a. Sunset all tax expenditures
- b. Appoint a taskforce to review which tax expenditures should continue

² "Evaluating Tax Incentives: Managing Existing Tax Credits," presented to the interim Revenue Stabilization and Tax Policy Committee, July 8 and 9, 2010.

- c. Consider pay-as-you-go (PAYGO) rules for tax expenditures
- d. Consider the entire tax code rather than scrutinize certain tax expenditures in a piecemeal approach.

STAFF RECOMMENDATIONS

- 1. The state should develop a tax expenditure report to review and analyze the effects of all of its major tax expenditures.
- 2. New tax expenditure proposals should be subject to thorough review, including detailed information on all major costs and benefits of the proposal.
- 3. The need for caps and/or sunset provision should be examined to enable the state to manage the fiscal impacts of tax expenditures in times of falling revenues.
