

Fiscal impact reports (FIRs) are prepared by the Legislative Finance Committee (LFC) for standing finance committees of the NM Legislature. The LFC does not assume responsibility for the accuracy of these reports if they are used for other purposes.

Current FIRs (in HTML & Adobe PDF formats) are available on the NM Legislative Website (legis.state.nm.us). Adobe PDF versions include all attachments, whereas HTML versions may not. Previously issued FIRs and attachments may be obtained from the LFC in Suite 101 of the State Capitol Building North.

SUMMARY

Synopsis of Bill

House Memorial 34 requests the Health Policy Commission convene an expert task force to study the correlation between antidepressant use and suicidal thoughts and behaviors and to recommend solutions to address any correlation.

If a correlation exists, the task force will further examine mandatory continuing medical education courses for providers prescribing antidepressants in young people.

FISCAL IMPLICATIONS

Agencies will have expenditures in providing staff time to support the task force.

The task force will be required to consult with regional and national experts in children's behavioral health to review relevant regulatory and statutory issues on whether a correlation exists and provide recommendations for best practice in the area of antidepressant pharmaceutical use in children and adolescents.

SIGNIFICANT ISSUES

The literature on the link between antidepressant use in children, and suicides and/or suicidal behavior is inconsistent as to whether there is a link.

DOH reports that debate continues at the national level as to the effectiveness of prescription antidepressant use in adolescents. The Federal Food and Drug Administration has issued public

warning on the increased risk of suicidal thoughts in adolescents treated with a particular class of antidepressants called selective serotonin reuptake inhibitors (SSRIs). However, the medical profession, including the American Psychiatric Association, has conducted numerous studies that have not found a correlation between the use of SSRIs and suicidal thoughts.

DOH further reports that guidelines for adolescent depression in primary care were recently published in Pediatrics, Vol.120, No.5, November 2007, that serve to inform the issues presented in the bill. In that issue, it was reported that prescriptions of antidepressants for children and adolescents decreased by 19% in the third quarter of 2004 and 16% in the fourth quarter compared with the year before. Concern has been expressed that this reduction of antidepressants prescribed may be related to the 18.2% increase in US youth suicides (from 1737 to 1935) from 2003 to 2004 after a decade of steady declines.

PERFORMANCE IMPLICATIONS

The FDA does require specialized training for certain drugs. The prescribing of antidepressants isn't currently one of them.

ADMINISTRATIVE IMPLICATIONS

The HPC will be responsible for administrative support and oversight of task force meetings to ensure the resolutions in the Memorial are met in a timely manner. In addition, the HPC will be responsible for ensuring a full complement of health policy experts to participate on the task force; and, produce, distribute and maintain task force reports.

TECHNICAL ISSUES

Page 1, line 13 after the word "behaviors" in the title, add "in children and adolescents" if that is the true intent of the Memorial.

CONFLICT, DUPLICATION, COMPANIONSHIP, RELATIONSHIP

HM 34 relates to HB 30, which appropriates \$100 thousand to DOH to implement a Native American, youth-led, peer-to-peer suicide prevention program in McKinley and San Juan counties.

OTHER SUBSTANTIVE ISSUES

DOH and HPC report that New Mexico prevalence of attempted suicide by adolescents was the third highest among the states and was 1.5 times the national rate of 8.3%. In addition, 28.7% of high school students reported persistent feelings of sadness and hopelessness, 20.5% had made a suicide plan, and 12.5% have attempted suicide. Suicide rates are also highest among Native American and Hispanic youth in New Mexico with 21% of Native American youth in grades 9-12 attempting suicide.

WHAT WILL BE THE CONSEQUENCES OF NOT ENACTING THIS BILL

The Federal Drug Administration will continue to make the determination for special training or labeling requirements necessary for pharmaceuticals with severe side effects.
